**Dance Teaching Methods and Curriculum Design** Gayle Kassing, Danielle Jay-Kirschenbaum, Danielle Mary Jay, 2021  
Dance Teaching Methods and Curriculum Design Second Edition presents a comprehensive model that prepares students to teach dance in school and community settings. It offers 14 dance units and many tools to help students learn to design lesson plans and units and create their own dance portfolio. Handbook of Research on Tools for Teaching Computational Thinking in P-12 Education Kalogiannakis, Michail, Papadakis, Stamatios, 2020-06-26 While the growth of computational thinking has brought new awareness to the importance of computing education it has also created new challenges. Many educational initiatives focus solely on the programming aspects such as variables, loops, conditionals, parallelism, operators, and data handling, divorcing computing from real world contexts and applications. This decontextualization threatens to make learners believe that they do not need to learn computing as they cannot envision a future in which they will need to use it just as many see math and physics education as unnecessary. The Handbook of Research on Tools for Teaching Computational Thinking in P 12 Education is a cutting edge research publication that examines the implementation of computational thinking into school curriculum in order to develop creative problem solving skills and to build a computational identity which will allow for future STEM growth. Moreover the book advocates for a new approach to computing education that argues that while learning about computing young people should also have opportunities to create with computing which will have a direct impact on their lives and their communities. Featuring a wide range of topics such as assessment, digital teaching and educational robotics, this book is ideal for academicians, instructional designers, teachers, education professionals, administrators, researchers, and students. **The New Quick & Easy Block Tool!
