Accommodation - Focusing of the eye in a near object through relaxation of the ciliary muscle and thickening of the lens.

Amblyopia - The loss of vision without any apparent disease of the eye.

Ametropia - A refractive error in which the eye, when in a state of rest, does not focus the image of an object upon the retina, includes hyperopia, myopia, and astigmatism

Aniseikonia - A condition in which the ocular image of an object as seen by one eye differs so much in size or shape from that seen by the other eye that the two images cannot be fused into a single impression

Anisometropia - A condition in which the refractive error of one eye significantly differs from that of the other; each eye must have the same sign i.e. Both eyes are myopic or hyperopic

Antimetropia - The refractive condition whereby the signs in each eye are opposite; one eye is hyperopic while the other is myopic

Aphakia - An absence of the crystalline Lens of the eye

Aqueous humor - The clear watery fluid that fills the anterior and posterior chambers within the front part of the eye

Astigmatism - A refractive error that prevents the light rays from coming to a single focus on the retina because of the different degrees of refraction in the various meridians of the eye

Cataract - A condition in which the crystalline lens of the eye, or its capsule, or both become opaque with consequent loss of visual acuity

Choroid - The vascular intermediate coat that furnishes nourishment to other parts of the eyeball

Ciliary body - That portion of the vascular coat between the iris and the choroid. It consists of ciliary processes and the ciliary muscle

Compound hyperopic astigmatism - The refractive error which results in two points of focus falling behind the retina

Compound myopic astigmatism - The refractive error which results in two points of focus falling in front of the retina

Cornea - The clear transparent portion of the outer coat of the eyeball forming the covering of the aqueous chamber

Crystalline lens - A transparent colorless body suspended in the front part of the eyeball, between the aqueous and the vitreous, the function of which is to bring the rays of light to focus on the retina

Diplopia - The seeing of one object as two

Emmetropia - The refractive condition of the normal eye when the eye is at rest, the image of distant objects is brought to a focus on the retina

Fusion - The power of coordination by which the images received by the two eyes become a single image
