Networking for Big Data Shui Yu, Xiaodong Lin, Jelena Misic, Xuemin (Sherman) Shen, 2015-07-28 Networking for Big Data supplies an unprecedented look at cutting edge research on the networking and communication aspects of Big Data Starting with a comprehensive introduction to Big Data and its networking issues it offers deep technical coverage of both theory and applications The book is divided into four sections introduction to Big Data Anomaly-Detection and Health-Analysis Techniques for Core Router Systems Shi Jin, Zhaobo Zhang, Krishnendu Chakrabarty, Xinli Gu, 2019-12-19 This book tackles important problems of anomaly detection and health status analysis in complex core router systems integral to

today's Internet Protocol (IP) networks. The techniques described provide the first comprehensive set of data-driven resiliency solutions for core router systems. The authors present an anomaly detector for core router systems using correlation-based time series analysis which monitors a set of features of a complex core router system. They also describe the design of a changepoint-based anomaly detector such that anomaly detection can be adaptive to changes in the statistical features of data streams. The presentation also includes a symbol-based health status analyzer that first encodes as a symbol sequence the long-term complex time series collected from a number of core routers and then utilizes the symbol sequence for health analysis. Finally, the authors describe an iterative self-learning procedure for assessing the health status. Enables Accurate Anomaly Detection Using Correlation-Based Time Series Analysis. Presents the design of a changepoint-based anomaly detector. Includes Hierarchical Symbol-based Health Status Analysis. Describes an iterative self-learning procedure for assessing the health status.

Smart Grid and Internet of Things Al-Sakib Khan Pathan, Zubair Md. Fadlullah, Mohamed Guerroumi, 2018-12-29. This book constitutes the refereed proceedings of the Second EAI International Conference on Smart Grid and Internet of Things (SGIoT 2018) held in Niagara Falls, Canada, Ontario, in July 2018. The 14 papers presented were carefully reviewed and selected from 25 submissions and present research results on how to achieve more efficient use of resources based largely on IoT-based machine-to-machine interactions in the smart grid communication networks. The smart grid also encompasses IoT technologies which monitor transmission lines, manage substations, integrate renewable energy generation (e.g., solar or wind) and utilize hybrid vehicle batteries. Through these technologies, the authorities can smartly identify outage problems and intelligently schedule the power generation and delivery to the customers.
