Laboratory Design Guide Brian Griffin, 2007-06-01 *Laboratory Design Guide* 3rd edition is a complete guide to the complex process of laboratory design and construction. With practical advice and detailed examples, it is an indispensable reference for anyone involved in building or renovating laboratories. In this working manual, Brian Griffin explains how to meet the unique combination of requirements that laboratory design entails. Considerations range from safety and site considerations to instrumentation and special furniture and accommodate the latest laboratory practices and the constant evolution of science. Case studies from around the world illustrate universal principles of good design while showing a variety of approaches. Revised throughout for this new edition, the book contains a brand new chapter on the role of the computer covering topics such as the virtual experiment, hot desking, virtual buildings, and computer-generated space relationship diagrams. There are also 10 new international case studies, including the Kadoorie Biological Sciences Building at the University of Hong Kong.

Common Elements of Renovations offers general design principles for the renovation and modernization of existing labs. Part II: Design Guidelines for a Number of Commonly Used Laboratories explains specifications, best practices, and guidelines for nineteen types of laboratories, with three new chapters covering nanotechnology, engineering, and autopsy labs. Part III: Laboratory Support Services addresses design issues for imaging facilities, support shops, hazardous waste facilities, and laboratory storerooms. Part IV: HVAC Systems explains how to heat, cool, and ventilate labs with an eye towards energy conservation. Part V: Administrative Procedures deals with bidding procedures, final acceptance inspections, and sustainability. The final part of the book features five appendices filled with commonly needed data and reference materials. This Fourth Edition is indispensable for all laboratory design teams, whether constructing a new laboratory or renovating an old facility to meet new objectives.
