The Science Teacher, 2008

[A Collaborative Approach to Understanding the Components of Successful Youth Development Programs](#) Jennifer Southwick Brown, 2006

Using Concept Maps in a Professional Development Program to Assess and Enhance Teachers' Understanding of Rational Number Jodean Emilyn Mathison Grunow, 1998

Natural Selection Theory in Non-majors' Biology Dianne Leigh Anderson, 2003

Evolution by natural selection is the dominant and unifying theme in biology yet many college students hold alternative

conceptions about the topic even after completing general biology To develop effective instructional strategies and track conceptual understanding it is useful to have a detailed assessment tool easily used with large classes This study presents the Conceptual Inventory of Natural Selection CINS a distractor driven twenty item multiple choice test that assesses understanding of ten concepts related to natural selection biotic potential stable populations limited natural resources limited survival variation within a population variation inherited differential survival change in populations origin of variation and origin of species Development refinement and field testing of individual CINS items are presented and validity readability reliability and factor analysis of the CINS are described There was significant correlation between student performance on the posttest CINS and end of semester interviews suggesting that the CINS is a useful classroom tool The CINS was used as both a pretest and posttest to determine relative difficulty of the concepts among college students The three most challenging concepts were random origin of variation how populations change over time due to changing proportions of alleles and how new species originate Many students chose distractors including need as a driving force Results support the use of non traditional methods as only students in such classes demonstrated any improvement on the CINS posttest Pre and posttesting with the CINS was also used to assess relative effectiveness of using two types of supplemental reading materials selections from narrative non textbook sources or from other general biology textbooks in a general biology course These results suggest that specific content of readings was more important than style of the readings Implications for teaching both students and pre service teachers are described *Understanding Models and Systems* David Eugene Thomas,2000 Reading and Study Skills Patricia Grant,1989 **What is Nursing? Exploring Theory and Practice** Dawn Ritchie,Carol Hall,2009-08-14 It is essential for students to understand the various strands that make nursing what it is This book clearly explores theories of nursing through their application within nursing practice It first considers the nature of nursing and how it is defined as a profession by nurses and by others in society It then looks at the activity of nursing its aims and how these are met through systems of care delivery Finally it explores what nursing is really like when you qualify and discusses the benefits and challenges of working in each of the main nursing fields of practice
