

CONCEPTUAL Physics PRACTICE SHEET

Electric Circuits

Parallel Circuits

1. In the circuit shown to the left there is a voltage drop of 6 V across each 3- Ω lamp. By Ohm's law, the current in each lamp is _____ A. The current through the battery is the sum of the currents in the lamps, _____ A.

THE SUM OF THE CURRENTS IN THE TWO BRANCH PATHS EQUALS THE CURRENT BOTH BEFORE AND AFTER IT DIVIDES!

2. Fill in the current in the eight blank spaces in the view of the same circuit shown again at the right.

3. Suppose a third identical lamp is added in parallel to the circuit. Sketch a schematic diagram of the 3-lamp circuit in the space at the left.

4. For the three identical lamps in parallel, the voltage drop across each lamp is _____ V. The current through each lamp is _____ A. The current through the battery is now _____ A. Is the circuit resistance now greater or less than before the third lamp was added? Explain.

5. Which circuit dissipates more power, the 3-lamp circuit or the 2-lamp circuit? (Another way of asking this is which circuit would glow brightest; which would be best seen on a dark night from a great distance?) Defend your answer and compare this to the similar case for 2- and 3-lamp series circuits.
