Wheeler,2001 The main objective of this book is to provide non science majors with a clear and logical presentation of some of the basic concepts and principles of classical and modern physics To create an appropriate language for students the authors have translated the logic vocabulary and values of physics into longer less tightly structured narration that students can understand As mathematics holds much of the beauty and power of physics the authors have written and included a mathematical supplement PHYSICS A NUMERICAL WORLD VIEW packaged free with this text **On the Theory of the Reflection and**

**Refraction of Light** Hendrik Antoon Lorentz, 1997 1997 the centennial year of the electron provides a good occasion to publish the first English translation ever made of H A Lorentz s doctoral dissertation of 1875 Just 22 years old Lorentz took up and handled magisterially one major unresolved problem of Maxwell s electromagnetic theory the reflection and refraction of light By then the superiority of Maxwell s electromagnetic ether theory over current elastic solid conceptions such as Fresnel s was not nearly a settled issue In his dissertation Lorentz strove with considerable success to make it that Still he found that neither theory allowed for a satisfactory account of dispersion One intriguing aspect of Lorentz s earliest scientific achievement which within two years was to earn him the chair of theoretical physics at Leyden University is that a range of subjects soon to occupy him for the rest of his life are already clearly foreshadowed in it So far Lorentz s first step in science has existed only in the original Dutch and in a French translation made long ago as part of the Collected Works Here the joint translators have striven to provide a fluently readable full text while preserving the flavor of Lorentz original language and style
