

Chapters -38-40

After studying these chapters you should be able to describe the following and be able to use the underlying concepts to solve numerical problems.

1. What is blackbody radiation (optional).
2. How classical theories fail to account for the blackbody radiation(optional).
3. How Planck's model describes light as constituted of photons - quanta of energy.
4. How the photoelectric effect can be described using the photon concept
4. How, according to the de Broglie's hypothesis, 'particles' can behave like waves.
5. How a quantum object can be described in terms of its wave-function.
6. How to calculate the quantized energy states of a particle in a box.
7. How the transition from one state to a lower state leads to emission of photons.

1. Blackbody Radiation (Optional)

When any object is heated above absolute zero ($0\text{ K} = -273.15^\circ\text{C}$) it will emit energy in the form of **electromagnetic radiation**.

A **blackbody** is an idealized body or a theoretical model which absorbs all radiation incident on it. It will not transmit or reflect any radiation, hence the name "blackbody". It is an idealized object which is a "perfect" absorber and a "perfect" emitter of radiation over all **wavelengths**. Most real objects will not absorb all radiation or emit all wavelengths.

The spectral distribution of the thermal energy radiated by a blackbody is determined solely by **its temperature**.

A typical example of blackbody radiation (energy radiated/nm vs. λ) is shown in Fig. 1

Physics, Volume Two: Chapters 18-32 John D. Cutnell, Kenneth W. Johnson, 2014-12-15 Cutnell and Johnson has been the 1 text in the algebra based physics market for almost 20 years The 10th edition brings on new co authors David Young and Shane Stadler both out of LSU The Cutnell offering now includes enhanced features and functionality The authors have been extensively involved in the creation and adaptation of valuable resources for the text This edition includes chapters 18 32 **Wonder** Frank C. Keil, 2022-03-01 How we can all be lifelong wonderers restoring the sense of joy in discovery we felt as children From an early age children pepper adults with questions that ask why and how Why do balloons float How do plants grow from seeds Why do birds have feathers Young children have a powerful drive to learn about their world wanting to know not just what something is but also how it got to be that way and how it works Most adults on the other hand have little curiosity about whys and hows we might unlock a door for example or boil an egg with no idea of what happens to make such a thing possible How can grown ups recapture a child s sense of wonder at the world In this book Frank Keil describes the cognitive dispositions that set children on their paths of discovery and explains how we can all become lifelong wonderers Keil describes recent research on children s minds that reveals an extraordinary set of emerging abilities that underpin their joy of discovery their need to learn not just the facts but the underlying causal patterns at the very heart of science This glorious sense of wonder however is stifled beginning in elementary school Later with little interest in causal mechanisms and motivated by intellectual blind spots as adults we become vulnerable to misinformation and manipulation ready to believe things that aren t true Of course the polymaths among us have retained their sense of wonder and Keil explains the habits of mind and ways of wondering that allow them and can enable us to experience the joy of asking why and how
