#### Conceptual Questions

**13.1. An electrified rod attracts pieces of paper. After a while these pieces fly away! Why?**

Suppose a glass rod is rubbed with silk, it becomes positively charged (an electrified rod). When this glass rod is brought close to the pieces of paper, by electrostatic induction, a negative charge appears on pieces of paper due to which these pieces of paper attracted towards the rod. But when these pieces of paper touch the charged rod, some of electrons from the pieces of paper are transferred to the glass rod and then pieces of paper also become positively charged, due to which there will be the force of repulsion between rod and pieces of paper, hence the pieces of paper fly away from the rod.

**13.2.- How much negative charge has been removed from a positively charged electroscope if it has a charge of  $7.5 \times 10^{-13} \text{ C}$  ?**

$7.5 \times 10^{-13} \text{ C}$  of negative charge has been removed from an electroscope to produce a positive charge of  $7.5 \times 10^{-13} \text{ C}$  on the electroscope.

**13.3. In what direction will a positively charged particle move in an electric field?**

In an electric field positively charged particle will move from a point of higher potential to a point of lower potential i.e., the positively charged particle will move in the direction of electric field.

**13.4. Does each capacitor carry equal charge in series combination? Explain.**

Yes, each capacitor carries equal charge in series combination. When capacitors are connected in series, the same amount of charge flows through each capacitor. Therefore, each capacitor carries equal charge.

In a series combination of capacitors, the same amount of charge flows through each capacitor. Therefore, each capacitor carries equal charge. This is because the capacitors are connected in series, and the same amount of charge flows through each capacitor.

**Physics for Global Scientists and Engineers, Volume 2** Raymond A. Serway, John W. Jewett, Wayne (California State Polytechnic University Rowlands, Pomona), Kate Wilson, Wayne Rowlands, Anna (University of Canberra Wilson, Australian National University), 2016-10-01 This second edition of Serway's Physics For Global Scientists and Engineers is a practical and engaging introduction for students of calculus based physics. Students love the Australian Asia Pacific and international case studies and worked examples, concise language and high quality artwork in two easy to carry volumes. NEW key topics in physics such as the Higgs boson engage students and keep them interested. NEW Maths icons highlight mathematical concepts in the text and direct students to the relevant information in the Maths Appendix. NEW Index of Symbols provides students with a quick reference for the symbols used throughout the book. This volume two includes Electricity and magnetism, Light and optics and Quantum physics. Volume one covers Mechanics, Mechanical properties of solids and fluids, Oscillations and mechanical waves and Thermodynamics. Course in Physics 4: Electrostatics and Current Electricity,

**Conceptual Electromagnetics** Branislav M. Notaroš, 2017-07-06 This is a textbook on electromagnetic fields and waves completely based on conceptual understanding of electromagnetics. The text provides operational knowledge and firm grasp of electromagnetic fundamentals aimed toward practical engineering applications by combining fundamental theory and a unique and comprehensive collection of as many as 888 conceptual questions and problems in electromagnetics. Conceptual questions are designed to strongly enforce and enhance both the theoretical concepts and understanding and problem solving techniques and skills in electromagnetics. Modern Take On Physics, A - Volume 2: Classical And Quantum Field Theory Giovanni Organtini, Graziano Surace, 2025-03-17 These two volumes cover the classical topics typically taught in undergraduate physics courses and beyond. However, we teach classical physics using a very different language from traditional books influenced by the language of modern physics in a move to encourage a positive approach towards the latter subject. Based around the unifying concept of energy, we take a distinct approach to the organisation of material, presenting physics in a cohesive manner without separating topics such as mechanics, kinematics, thermodynamics, electricity and magnetism. Instead, physics is revealed gradually, emphasising a holistic approach to science. Despite this peculiarity, we have maintained the conventional separation between Physics I and II to assist teachers in smoothly integrating these books into their courses. These innovative volumes present valuable new perspectives. Although their approach is bold, they will certainly prompt interesting reflections on traditional teachings. A significant portion of this second volume is committed to modern physics, including an introduction to the standard model of fundamental interactions. The old quantum mechanics is largely excluded in favour of quantum field theory, which we present in a manner accessible to undergraduate students.

**Principles of Physics** Raymond A. Serway, 1997-08 *Concepts in Biochemistry* William K. Stephenson, 1978 A comprehensive up to date treatment of the biochemistry essential for an understanding of molecular and cellular biological
