

High Mast Light Pole Foundation Design

High Mast Light Pole Foundation Design is generally undertaken in the same manner as any concrete spread or pad foundation. The principle is to make the foundation large enough so that the overturning moment does not exceed the maximum bearing capacity of the soil.

As high mast light poles are standard fixtures they are often designed using standard foundation types which depend on the size of the mast and its location. The High Mast Light Pole Design Spreadsheet includes a unique High Mast Light Pole Foundation Design Spreadsheet which allows the user to specify a suitable high mast lighting foundation in seconds, from one of three typical high mast foundation design types.

The overturning moment depends on the height of the mast, the size and number of lanterns and on the location. This is explained in detail on our High Mast Wind Loading and High Mast Light Pole Wind Pressure pages.

Soil Allowable Maximum Bearing Capacity

High mast pole foundation design is usually based on the assumption that the underlying soil will not fail if the foundation limits the bearing pressure to a set value called the allowable maximum bearing capacity. The maximum bearing capacity of the soil is the pressure at which the soil starts to fail. This is a critical parameter and must be ascertained before detailed high mast lighting foundation design can begin. The bearing capacity of a soil can only be determined from site tests such as plate bearing tests, CPTs or SPTs. This should be undertaken by a suitable qualified civil or geotechnical engineer.

For preliminary design there have been a number of very general guidelines for the design of high mast pole foundations which include standard designs based on one or two assumed values for the allowable maximum bearing pressure. Below is one example taken from the Abacus High Mast lighting foundation design brochure.

These values are only for use in preliminary design and the bearing capacity must be checked with site measurements before detailed design is done. However this does give a handy guide for preliminary high mast light pole foundation design.

Types of subsoil	Condition of subsoil	Field test applicable	Approximate allowance bearing pressure kN/m ²
Rock	Not inferior to sandstone, limestone or firm chalk	Requires at least a pneumatic or other mechanically-operated pick for excavation	1000
Gravel, sand	Compact	Requires pick for excavation. Wooden peg 50mm ² in cross section is hard to drive beyond 150mm	Dense to very dense 150-400 Loose to medium dense 50-250
Clay, sandy clay	Firm	Can be moulded by substantial pressure with the fingers and excavated with graft or spade	50-100
Sand*, silty sand*, clayey sand*	Loose	Can be excavated with a spade. Wooden peg 50mm ² in cross section can be easily driven	<75
Silt*, clay*, sandy clay*, silty clay*	Soft	Fairly easily moulded with the fingers and readily excavated	<75
Silt*, clay*, sandy clay*, silty clay*	Very soft	Natural sample in winter conditions exudes between fingers when squeezed in fist	<75

Structural Foundation Designers Manual William George Curtin, 1994 This book is based on over 30 years intensive practical experience As a designers manual its aim is to simplify as much as possible a complex subject which is often treated too theoretically by providing simple buildable and economical foundations It explains simply clearly and with numerous worked examples how economic foundation design is achieved It deals with both straightforward and difficult sites following the process through site investigation foundation selection and finally design The book includes chapters on many of the aspects of foundation engineering that most other books avoid including filled and contaminated sites mining and other man made conditions that are all too frequently encountered A step by step procedure for the design

of lightweight and flexible rafts is provided to fill the gap in guidance on this much neglected yet extremely economical foundation solution. The book concentrates on foundations for building structures rather than the larger civil engineering foundations and includes many innovative and economic solutions developed and used by the authors' practice but not often covered in other publications. An extensive series of appendices completes the book providing a valuable source of reference. Written by practising engineers for practising engineers, it draws on Curtins' wide experience in the field and will be a worthy companion to their **Structural Masonry Designers Manual**, also published by Blackwell Scientific Publications.

Structural Foundation Designers' Manual Norman Seward, 2012-11-15. This manual for civil and structural engineers aims to simplify the design of structural foundations as much as possible. Structured around the typical design process through site investigation, foundation selection and finally design, it explains clearly with numerous worked examples how economic foundation design can be achieved in both straightforward and difficult sites. Fully updated to ensure compliance with Eurocodes, the **Structural Foundation Designers Manual** includes chapters on many aspects of foundation engineering that other books avoid, including filled and contaminated sites and mining and other man-made conditions. Features a step-by-step procedure for the design of lightweight and flexible rafts to fill the gap in guidance in this extremely economical foundation solution. Concentrates on foundations for building structures rather than the larger civil engineering foundations. Includes many innovative and economic solutions developed and used by the authors' practice but not often covered in other publications. Provides an extensive series of appendices as a valuable reference source.

Foundation Engineering Handbook Robert Day, 2005-12-12. This practical resource focuses on foundation engineering, emphasizing the geotechnical aspects and the use of the International Building Code. Develop a complete program of foundation investigation. Deal with geotechnical field and laboratory studies. Analyze data for the design of foundations. Carry out an engineering evaluation of foundation construction. Prepare foundation engineering reports.

Metric Handbook Pamela Buxton, 2018-02-23. Significantly updated in reference to the latest construction standards and new building types. Sustainable design integrated into chapters throughout. Over half of the entire book has now been updated since 2015. Over 100 000 copies sold to successive generations of architects and designers. This book belongs in every design office. The **Metric Handbook** is the major handbook of planning and design data for architects and architecture students. Covering basic design data for all the major building types, it is the ideal starting point for any project. For each building type, the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of. As well as buildings, the **Metric Handbook** deals with broader aspects of design such as materials, acoustics and lighting and general design data on human dimensions and space requirements. The **Metric Handbook** is the unique reference for solving everyday planning problems.
