## Description and Intended Use

This UI describes the Dräger PSS® 7000 Series of SCBA fitted with the following:

- A Dräger Sentinel 7000 electronic monitoring system, with integral personal alert safety system (PASS).
- A Dräger wireless back-up display (HUD) unit.

The Dräger PSS® 7000 is a compact and lightweight apparatus that provides the wearer respiratory protection when working in contaminated or oxygen-deficient conditions. The wearer can be used as a self-contained system or with an independent air supply to increase effective operation time. The system is fully compatible with a wide range of compressed air cylinders, face masks and lung demand regulators (LDRs).

The carrying system has a height adjustable articulating backplate (8, Fig 1) that provides improved comfort and ease of use, resulting in increased maneuverability and reduced fatigue. The backplate can be used as a self-contained system or with an independent air supply to increase effective operation time. The system is fully compatible with a wide range of compressed air cylinders, face masks and lung demand regulators (LDRs).

The system is fully compatible with a wide range of compressed air cylinders, face masks and lung demand regulators (LDRs).

The PASS function of Sentinel 7000 electronic monitoring system is a multi-function system that provides continuous monitoring of the SCBA status including remaining cylinder pressure, remaining of the reserve, main battery condition, and air-source time (EOGT) and PASS. It gives the user continuous system status and audible and visual alarm when an unsafe condition exists. User controls of the system is through a user interface (1) that incorporates switches, LEDs, a liquid crystal display (LCD) display screen and an alarm siren. A backlight illuminates the user interface display screen.

The PASS function of Sentinel 7000 electronic monitoring system is an alarm system that can be activated manually or automatically. The automatic alarm uses a motion sensor to detect movement and activate a pressure and main alarm at preset intervals when no movement is sensed. The manual alarm is activated by a press button on the user interface. A function of the PASS is that it detects movement or vibration to which the wearer is subjected.

## General Information

## Batteries

 Danger of explosion. Do not charge the batteries in an explosive or flammable atmosphere.

 Do not dispose of batteries in a fire. Batteries must be disposed of in line with local regulations.

 Do not attempt to recharge any non-rechargeable battery.

## Battery information:

Main battery – 7.5 V (2 x 1.5 V AA alkaline batteries)

Back-up battery – 3 V (CR123 lithium battery)

HUD battery – 3 V (CR123 lithium battery)

Use only the following approved battery types:

General 1500 (1.5 V)

Eveready 1200 (1.5 V)

Phoenix CR123AL/123P (3 V)

 Batteries are supplied with the equipment but are not fitted. Dräger recommends that the batteries be removed when the system is not used for long periods as a small amount of discharge will occur. The normal operating life of the batteries is dependent on usage time, frequency of alarms, backlight illumination and ambient temperature.

 The back-up battery will only supply power when the main battery is disconnected or discharged. When this occurs, the back-up battery will only supply power for HUD functions.

## Preparation for Use

Equipment configurations for non-OSHA use are detailed in a NIOSH Approval Table (refer to instruction no. 33052214). Configurations for OSHA use are detailed later in this instruction (refer to CGRA User).

## Installing the Back-Up Battery

- Open the SCBA to access the battery compartment.
- Uncover and remove the battery cap (1, Fig 3), using a suitable coin.
- Insert the battery, with terminal end first, into the battery compartment.
- Fast and secure the battery cap. Do not over-tighten.

## Installing the Main Battery

- Open the SCBA to access the pressure module (1, Fig 3).
- Connect the battery terminals (1) to the battery module and the sealing ring and the battery terminals (2) must be clean and undamaged.
- Locate the two slots in the top of the battery pack (2) on the tabs in the battery housing.
- Place the battery into position until an audible click is heard, to indicate a secure attachment. The Sentinel 7000 will emit a single tone and will commence the self-check sequence (refer to Sentinel 7000 Self Check).
- Press and hold the PASS and 2 buttons of the user interface and the display clears, then immediately release the buttons.

 A battery check is performed during the self-check sequence. If the battery voltage is below a preset voltage the backlight will illuminate, the low battery icon (Fig 4) will be displayed, the Sentinel 7000 will emit a series of tones for approximately four seconds, and then the display will switch off. When the tones resume replace the battery.

 To remove the battery insert and press the two pronged key (supplied with the SCBA) into the two slots at the base of the battery. This will open the locking latch, allowing the battery to be removed.

## Installing the Cylinder

 The following instructions are for a screw-on cylinder coupling. Installation of a quick-connect cylinder coupling is detailed in a separate UI (refer to instruction no. 33052200).

- Set the carrying frame backplate to the short (S) position (refer to Adjusting the Backplate).
- Inspect and install the following:
  - The external thread of the cylinder valve port.
  - The internal thread of the first-stage regulator handthread.
  - The O-ring seal in the pressure connector is in position and not damaged.
  - The tube to the external filter in the HP connector of the first-stage regulator is clean and free from dirt and contamination.
  - Lay the carrying frame horizontal and fully extend the cylinder arm.

Take care to prevent impact damage as the cylinder valve is aligned with the first-stage regulator handthread.

- Insert the cylinder (valve and first) through the cylinder strap, to align the cylinder valve with the handthread.
- Lift the cylinder and backplate into the vertical position (supported on the end of the cylinder).
- Align and fully tighten the handthread (supported). Do not use tools or over-tighten.
- Place the unit back into the horizontal position.
- Take up the slack of the cylinder strap and activate the cam-lock mechanism by pulling the free end of the strap back over the cylinder (Fig 5).
- Secure the strap using the velcro fastening.

## Adjusting the Backplate Height

- Lift the SCBA into the vertical position.
- Simultaneously press the two spring-loaded buttons (Fig 6) of the locking catch.
- Slide the yoke to the required position (short (S), medium (M) or long (L)).
- Press the yoke and the frame and attempt to raise and lower the yoke to confirm that the locking catch is fully engaged.

## Connecting the LDR and HUD

- Insert and push the male coupling of the LDR hose into the quick-release coupling of the SCBA medium pressure hose until it clicks into position. Check the security of the connection (it will click) and the LDR is in the fit a mark at this stage).
- Insert a compatible HUD into the face mask (refer instruction no. 33052234).

## Pre-Operational Checks

## Sentinel 7000 Self Check

 The self check can be performed with or without a pressurized cylinder fitted.

Press the LPH button of the user interface, or open the cylinder valve of a pressurized cylinder. The following self-check sequence will commence:

- First stage – The Sentinel 7000 will emit a single tone from the user interface and the external alarm siren, and the display backlight will illuminate.
- Second stage – The display will show a lock symbol of Fig 11; the blue, red and green LEDs (Fig 8) will illuminate.
- Third stage – The display will show the cylinder type (Fig 9) 20-15 psi or 4500 psi.
