Real-Time C++ Christopher Kormanyos,2021-07-14 With this book Christopher Kormanyos delivers a highly practical guide to programming real time embedded microcontroller systems in C It is divided into three parts plus several appendices Part I provides a foundation for real time C by covering language technologies including object oriented methods template programming and optimization Next part II presents detailed

descriptions of a variety of C components that are widely used in microcontroller programming. It details some of C's most powerful language elements such as class types, templates, and the STL to develop components for microcontroller register access, low-level drivers, custom memory management, embedded containers, multitasking, etc. Finally, part III describes mathematical methods and generic utilities that can be employed to solve recurring problems in real-time C. The appendices include a brief C language tutorial, information on the real-time C development environment, and instructions for building GNU GCC cross-compilers and a microcontroller circuit. For this fourth edition, the most recent specification of C 20 is used throughout the text. Several sections on new C 20 functionality have been added, and various others reworked to reflect changes in the standard. Also, several new example projects ranging from introductory to advanced level are included, and existing ones extended. Various reader suggestions have been incorporated. Efficiency is always in focus, and numerous examples are backed up with runtime measurements and size analyses that quantify the true costs of the code down to the very last byte and microsecond. The target audience of this book mainly consists of students and professionals interested in real-time C. Readers should be familiar with C or another programming language and will benefit most if they have had some previous experience with microcontroller electronics and the performance and size issues prevalent in embedded systems programming.

Optimizing C++ Steve Heller, 1999. CD-ROM contains DJGPP compiler and source code for the examples in the book.

Journal of Sustainable Mobility Vol. 2 Issue 1 Michael Zhang, Fuquan Zhao, Han Hao, 2024-11-01. After three decades of rapid economic growth, China became the world's second largest economy in 2010, after the United States of America. Along with the prospect of lifting millions out of poverty and improving living standards, China is facing yet new challenges of rapid urbanization. Recent research findings show that in 2012, urbanization rate was 52.6% in China. Lacy et al. (2013) predicts that by 2020, the number of megacities in China with an urban population of more than 10 million will increase to thirteen. Along with the increase in urban population and living standards, there has been a rapid increase of car ownership in China. It is estimated that there are more than five million vehicles in Beijing. Cheng (2013, Economist 2013) Large cities and prefecture-level cities already contributed 89.6% of China's total industrial CO₂ emissions. One day in January 2013, air in Beijing was heavily polluted to a level of toxicity smog forty times the standard safe level set by the World Health Organization (Economist 2013). At the international level, transport contributed 61.5% to world petroleum consumption and 22.3% to global CO₂ emissions in 2010 (IEA 2012). While the overall level of CO₂ emissions in developed economies is stabilizing and in some cases declining, the levels in the developing and emerging economies are increasing. Large emerging economies with megacities will imminently become the major concerns of transport-related CO₂ emissions. Without strategic innovations in the automotive industry and transport management system, the current state of China's transport sector is not sustainable. The long-term sustainable solutions are likely to emerge from the interplay of economic, environmental, social, and technological factors. The Special Issue, partnered with the Second International Symposium on Sustainable Mobility, focuses

on the issues of developing policies and corporate strategies to help the automotive industry transport management systems and urban planning to embark on a sustainable path to future growth and development WBCSD 2007 World Bank 2008 The critical debate and research findings of this issue shed light on future research and practice on sustainable mobility in emerging economies
