Hynd, 2013-12-16 This volume is an attempt to synthesize the understandings we have about reading to learn Although learning at all ages is discussed in this volume the main focus is on middle and high school classrooms critical spaces of learning and thinking The amount of knowledge presented in written form is increasing and the information we get from texts is often conflicting We are in a knowledge explosion that leaves us reeling and may effectively disenfranchise those who are not keeping up There has never been a more crucial time for students to understand learn from and think critically about the information in various forms of text Thus understanding what it means to learn is vital for all educators Learning from text is a complex matter that includes student factors social ethnic and cultural differences as well as varying motivations self perceptions goals and needs instructional and teacher factors and disciplinary and social factors One important goal of the book is to encourage practicing teachers to learn to consider their students in new ways to see them as being influenced by and as influencing not just the classroom but the total fabric of the disciplines they are learning Equally important it is intended to foster further research efforts from local studies of classrooms by teachers to large scale studies that produce generalizable understandings about learning from text This volume a result of the editor's and contributors work with the National Reading Research Center will be of interest to all researchers graduate students practicing teachers and teachers in training who are interested in understanding the issues that are central to improving students learning from text **Intelligent Tutoring Systems** Barry P. Goettl, Henry M. Halff, Carol L. Redfield, Valerie J. Shute, 2003-06-29 The first International Conference on Intelligent Tutoring Systems ITS was held ten years ago in Montreal ITS 88 It was so well received by the international community that the organizers decided to do it again in Montreal four years later in 1992 and then again in 1996 ITS 98 differs from the previous ones in that this is the first time the conference

has been held outside of Montreal and it's only been two years not four since the last one. One interesting aspect of the ITS conferences is that they are not explicitly bound to some organization e.g. IEEE or AACE. Rather the founder of these conferences, Claude Frasson, started them as a means to congregate researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues. Thus the unifying theme is science. This year's hot topics differ from those in the earlier ITS conferences as they reflect ever-changing trends in ITS research. A few of the issues being examined at ITS 98 include Web-based tutoring systems, deploying ITS in the real world, tutoring and authoring tools, architectures and knowledge structure and representation.
