

## Chapter 5 Newton's Third Law of Motion More on Vectors

1. Each of the vertically-suspended blocks has the same weight  $W$ . The two forces acting on Block C ( $W$  and rope tension  $T$ ) are shown. Draw vectors to a reasonable scale for rope tensions acting on Blocks A and B.

2. The cart is pulled with force  $F$  at angle  $\theta$  as shown.  $F_x$  and  $F_y$  are components of  $F$ .

a. How will the magnitude of  $F_x$  change if the angle  $\theta$  is increased by a few degrees?

[more] [less] [no change]

b. How will the magnitude of  $F_y$  change if the angle  $\theta$  is increased by a few degrees?

[more] [less] [no change]

c. What will be the value of  $F_x$  if angle  $\theta$  is  $90^\circ$ ?

[more than  $F$ ] [zero] [no change]

If you're into trig.

$$\sin \theta = \frac{F_y}{F} ; \text{ so } F_y = F \sin \theta.$$

$$\cos \theta = \frac{F_x}{F} ; \text{ so } F_x = F \cos \theta.$$

3. Force  $F$  pulls three blocks of equal mass across a friction-free table. Draw vectors of appropriate lengths for the rope tensions on each block.

4. Consider the boom supported by hinge A and by a cable B. Vectors are shown for the weight  $W$  of the boom at its center, and  $W/2$  for vertical component of upward force supplied by the hinge.

a. Draw a vector representing the cable tension  $T$  at B. Why is it correct to draw its length so that the vertical component of  $T = W/2$ ?

b. Draw component  $T_x$  at B. Then draw the horizontal component of the force at A. How do these horizontal components compare, and why?

5. The block rests on the inclined plane. The vector for its weight  $W$  is shown. How many other forces act on the block, including static friction? \_\_\_\_\_. Draw them to a reasonable scale.

a. How does the component of  $W$  parallel to the plane compare with the force of friction? \_\_\_\_\_

b. How does the component of  $W$  perpendicular to the plane compare with the normal force? \_\_\_\_\_

*Religion and American Education* Warren A. Nord, 2014-07-01 Warren Nord's thoughtful book tackles an issue of great importance in contemporary America the role of religion in our public schools and universities According to Nord public opinion has been excessively polarized by those religious conservatives who would restore religious purposes and practices to public education and by those secular liberals for whom religion is irrelevant to everything in the curriculum While he maintains that public schools and universities must not promote religion he also argues that there are powerful philosophical political moral and constitutional reasons for requiring students to study religion Indeed only if religion is included in the curriculum will students receive a truly liberal education one that takes seriously a variety of ways of understanding the human experience Intended for a broad audience Nord's comprehensive study encompasses American history constitutional law educational theory and practice theology philosophy and ethics It also discusses a number of current controversial issues including multiculturalism moral education creationism academic freedom and the voucher and school choice movements

*Flood Risk Science and Management* Gareth Pender, Hazel Faulkner, 2010-12-01 Approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years Worldwide there has been a move from a strategy of flood defence to one of flood risk management Flood risk management includes flood prevention using hard defences where appropriate but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur This change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically environmentally and in terms of social equity Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change while socio economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management providing a multi disciplinary reference text covering a wide range of flood management topics Its targeted readership is the international research community from research students through to
