Topic: Psychology | Words: 2113 | Pages: 7

For my observation, I have viewed video recordings of three separate groups of children being engaged in play. The first video seems to show two caretakers playing with two children, using toy balls and cubes. The second, imaginative play video, contains three toddlers playing with the caretaker who is talking to them in both English and Spanish. The third video shows a group of at least 4 children engaging in role-playing activities. I have watched these videos on an evening, and will be using them to analyze, and measure the children's behavior and level of development.

For the 3 to the 8-month group, I will be primarily discussing the boy in a blue onesie, who is featured prominently in the video. The infant seems to be in a good physical condition, using the strength of his arms and body to support himself in a semi-crawling position. He is able to move around the playmat, as well as sit. Another prominent signifier of his development is the boy's ability to grasp objects. He can be seen taking hold of the green cube and pushing the red one away.

In terms of cognitive and linguistic development, the boy also seems to be quite adept. Firstly, he is seen actively interacting with the toys around him, clearly engaging in some form of play, reaching for objects that he wants to play with, and keeping them to himself. Furthermore, as seen by the interaction with the caretaker, the boy recognizes his own name being called and pays attention. In addition to that, he is also seen following toys and other objects with his gaze, as well as mouth on them.

As for social and cognitive development, the child in a blue onesie seems
