## KEY IDEAS

As you read this section, keep these questions in mind:

- Are there exceptions to the simple Mendelian pattern of inheritance?
- How do the heredity and the environment interact to influence phenotype?
- How do linked genes affect chromosome assortment and crossing over during meiosis?

## READING TOOLBOX

**Summarize** As you read, write paragraphs to summarize each of the exceptions to patterns of Mendelian inheritance. In your paragraphs, describe how each exception differs from the patterns Mendel saw in pea plants.

## LOOKING CLOSER

**1. Identify** What are two possible allele combinations for a person who has type A blood?

## READING CHECK

**2. Explain** What is codominance?

## What Are Some Exceptions to Mendelian Inheritance?

Mendel's work formed the foundation of hereditary science. However, scientists have discovered that traits are not always inherited according to the patterns Mendel described. In fact, the inheritance of most traits do not follow Mendel's rules.

## MULTIPLE ALLELES

An individual can have only two alleles for a gene. However, some genes have *multiple alleles*. That is, they have more than two possible alleles. For example, three alleles determine human blood types:  $I^A$ ,  $I^B$ , and  $i$ .

## CODOMINANCE

The human AB blood types show a condition called codominance. In **codominance**, both alleles for the same gene are expressed fully. That is, two traits can appear at the same time.

*Beyond the Gene* Jan Sapp, 1987-05-14 The scope and significance of cytoplasmic inheritance has been the subject of one of the longest controversies in the history of genetics In the first major book on the history of this subject Jan Sapp analyses the persistent attempts of investigators of non Mendelian inheritance to establish their claims in the face of strong resistance from nucleo centric geneticists and classical neo Darwinians A new perspective on the history of genetics is offered as he explores the conflicts which have shaped theoretical thinking about heredity and evolution throughout the century materialism vs vitalism reductionism vs holism preformation vs epigenesis neo Darwinism vs new Lamarckism and gradualism vs saltationism In so doing Sapp highlights competitive struggles for power among individuals and disciplinary groups He accepts that political interests and general social contexts may directly affect scientific ideas but develops the stronger thesis that social interests inside science itself are always involved in the content of scientific knowledge He goes on to show that there are no neutral judges in scientific controversies and investigates the social strategies and methodological rhetoric used by scientists when they defend or oppose a particular theory At the same time Sapp illustrates the social constraints that ensure the high cost and risk of entertaining unorthodox theories in the sciences
