

CHAPTER II INSTALLATION

2-1. UNPACKING.

Carefully remove the transmitter from the shipping carton, and examine it for evidence of damage. If any damage is discovered, immediately notify the transportation company that delivered the transmitter. Be sure to keep the shipping carton and packing material, as the transportation company will want to examine them if there is a damage claim. Keep the carton and packing material even if no shipping damage occurs. Having the original carton available makes packing the transmitter much easier should it ever be necessary to store it or return it to the factory for service.

NOTE

Fill out the enclosed registration card and return it to the factory immediately to insure registration and validation of the warranty.

Inspect the packing material closely before putting it away to be sure you have not overlooked the accessory hardware packed with the unit.

2-2. LOCATION.

In general, the location of the T-4XC is not critical. However, care should be taken to insure that space is provided around the unit to allow adequate air circulation. Extremely hot locations should be avoided. Do not cover the top of the unit with books, papers or pieces of equipment or overheating may result.

2-3. POWER REQUIREMENTS.

The T-4XC should be used with the R. L. Drake Model AC-4 Power Supply. This supply is designed to supply the proper voltages and currents for the unit from 120/240 VAC 50/60 cycles and will fit inside the MS-4 Speaker, used with your receiver. The T-4XC can also be operated from the R. L. Drake Model DC-4 Power Supply which operates

from 12 volts DC. The DC-4 also supplies 120 volts AC to power the receiver.

CAUTION

Never attempt to operate the T-4XC without first connecting to an antenna or 52 Ohm dummy load of sufficient power handling capacity. Serious damage can result.

2-4. ANTENNA REQUIREMENTS.

The T-4XC is designed for use with antennas resonant on the operating frequency and having approximate impedances of from 30 to 100 Ohms. Although there are many types of antennas which will meet this requirement, the simplest is a one-half wave dipole, center feed with 52 Ohm coax. For a detailed discussion on antennas, we suggest you refer to the ARRL Antenna Book or The Radio Amateur's Handbook. Antenna connection to the T-4XC is provided at the SO-239 coax connector located on the rear of the unit (see figure 2-2).

2-5. MICROPHONE REQUIREMENTS.

A microphone with a wide and flat frequency response will enable you to obtain peak performance from your T-4XC. For good VOX (voice control) operation, it is desirable for the mike to have a cardioid pattern to reduce pickup from the back and sides. This enables you to operate with higher receiver audio gain, giving better VOX operation and reducing echoes, reverberation, and noise pickup. Microphones with limited low or high frequency response and with peaks in the voice range should be avoided. A 0.210 inch diameter, three conductor microphone plug is required. The microphone must be connected as shown in figure 2-1, for proper VOX and push-to-talk operation. Many microphones that are furnished with a switch are wired so that the microphone cartridge is open or short circuited un-
