Part A Completion

Write the coefficient for each in the balanced equation, and balance the equation by changing the coefficient for each substance. Write balanced ionic equations for the reactions.

1. A solid compound is heated, producing a gas and a liquid. _____
 The products themselves are heated, changing into _____, but then
 become homogeneous liquids. Write the _____ equation and write
 the net ionic equation for _____, a chemical reaction between two
 homogeneous liquids. See page _____ in your textbook for
 instructions for the proper format of both of the _____, since neither is
 the liquid. The liquid was heated before the reaction. _____, is
 the homogeneous liquid.

2. A substance is heated, producing a gas and a liquid. _____

Mechanism of Organic Reactions Ajnish Kumar Gupta, Bharti Gupta, 2020-05-05 The guiding principle in writing this book was to create a textbook for students a textbook that presents the material in a way that they learn to solve all the questions along with the strategy to approach the problems In this book we mixed all our teaching experience of 15 years along with theoretical and experimental knowledge to generate a hand book for all students to reason their way to a solution rather than memorize a multitude of facts hoping they don't run out of memory This book covers mainly 6 units with 59 sections which are real concepts of Organic chemistry which involves Chemical reactions which a students must know in dealing any chemical reactions Organic chemistry is very easy and conceptual subject and need proper understanding of the basics and strategy to solve the questions in correct manner This book will prepare your right mindset for learning Organic Chemistry This mindset is essentially the one that focuses you on a small number of straight forward repeated fundamental concepts and helps you to apply them in different ways to solve the variety of problems you face in organic chemistry This book is complete as it not only covers theory in proper sequence but also provide varieties of questions along with 12 test papers to judge your knowledge before going to start chemical reactions In this book balance has to be achieved between the number of questions and the quality of the questions especially because it is relatively easy to frame a very large number of multiple choice questions and theory of the subject The questions in this book have been selected keeping three things in mind First the questions are such that they really test the understanding of the subject Second the questions cover all concepts Third the number of questions has been kept large enough to offer meaningful practice to the students **Disha 30**
