In the first chapter, a generalized Neuber concept of fictitious notch rounding is presented, where the microstructural support factors depend on the notch opening angle besides the loading mode. The second chapter specifies the notch stress factor, including the strain energy density and J integral concept, while the SED approach is applied to common fillet welded joints and to thin sheet lap welded joints. In the third chapter, the fourth chapter analyses elastic-plastic deformations in the near crack tip zone and discusses driving force parameters. The last chapter discusses thermomechanical fatigue stress and strain ranges. *Prof. H.
