

Answers

- This cylindrical bucket has a smaller diameter than the cylindrical bucket from Exercise 2. This cylindrical bucket is holding 64 cubic inches of water because that is the volume of the cube bucket. If the cylindrical bucket from Exercise 2 was filled to a height of 7 inches, it would hold about 197.9 cubic inches of water. Because the cylindrical bucket would hold less with the same height, the diameter must be smaller.
- Answer should include, but is not limited to:* A picture must be included in which the shapes are labeled with their names, dimensions, and volumes. The total volume of the shapes must be less than or equal to 360 in.^3

Technology Connection

- The surface area is multiplied by a factor of 4.
- The surface area is multiplied by a factor of 9.
- The surface area is multiplied by a factor of 16.
- The surface area is multiplied by a factor of n^2 .
The formula for the surface area is $S = 6s^2$, so when s is multiplied by n , the formula becomes $S = 6(ns)^2 = n^2 + 6s^2$.
