Handbook of Financial Data and Risk Information II

Margarita S. Brose, Mark D. Flood, Dilip Krishna, Bill Nichols, 2014 Volume I examines the business and regulatory context that makes risk information so important. A vast set of quantitative techniques, internal risk measurement and governance processes and supervisory reporting rules have grown up over time, all with important implications for modeling and managing risk information. Without an understanding of the broader forces at work, it is all too easy to get lost in the details. Back cover

Building Microsoft Exchange Applications Peter J. Krebs, 1996 This book will guide programmers and non-programmers to create a professional mail-enabled or groupware application in less than a day with Microsoft Exchange. The text shows how to use public folders, the Exchange Forms Designer, and Visual Basic for applications.

Computer Aided Design Wilson R Nyemba, 2022-12-16 The book comprehensively discusses principles, techniques, research activities, applications, and case studies of computer-aided design in a single volume. The textbook will serve as ideal study material for undergraduate and graduate students in a multitude of engineering disciplines. The book discusses techniques for wireframe, surface, and solid modelling, including practical cases and limitations. Each chapter contains solved examples and unsolved exercises. Includes research case studies and practical examples in enabling the user to link academic theory to engineering practice. Highlights the ability to convert graphic to non-graphic information, such as in drawing up bills of materials in practice. Discusses important topics including constructive solid geometry, Boolean operations on solid primitives, and Boolean algebra. This text covers different aspects of computer-aided design, from the basic two-dimensional constructions through modifications, use of layers, and dimensioning to advanced aspects such as three-dimensional modelling and customization of the package to suit different applications and disciplines. It further discusses important concepts including orthographic projections, isometric projections, 3D wireframe modelling, 3D surface modelling, solids of extrusion, and solids of revolution. It will serve as ideal study material for undergraduate and graduate students in the fields of mechanical engineering, industrial engineering, electrical and electronic engineering, civil and construction engineering, aerospace engineering, and manufacturing engineering.
