

Study Guide: Answer Key

Chapter 2: Chemistry of Life

Mission to Mars: Prospecting for life on the red planet

Driving Question 1: How do we define life?

Why should you care?

What is life? At first, the question of what is alive and what is not seems so elementary that it should not need asking. But, when it gets down to the details of what defines life, the question starts to seem a lot more profound. This chapter ponders the possibility of extraterrestrial life and how we can recognize and find it. Will it fall under the definition of life as we know it? Here on Earth, it is important to understand the nature of life, because it means understanding who we are and how we and all other life forms work.

What should you know?

To fully answer this Driving Question, you should be able to:

1. List and describe five characteristics inherent to all living things.
2. Defend an argument of whether a virus is or is not alive and how this may relate to life on other planets.

Infographic Focus:

The infographics most pertinent to the Driving Question are 2.1 and 2.2.

Test Your Vocabulary:

Match these terms to their definitions:

[BIOLOGY] *The study of life.*

[HOMEOSTASIS] *The maintenance of a relatively constant internal environment.*

[ENERGY] *The ability to do work. Living organisms obtain energy either directly from sunlight (through photosynthesis) or from food they consume.*

[VIRUS] *An infectious agent made up of a protein shell that encloses genetic information.*

[PRION] *A protein-only infectious agent.*

1. List and describe five characteristics inherent to all living things.

What defines life? Refer to Infographic 2.1 in your textbook if necessary.

- **Growth:**
How does the definition of growth differ for unicellular and multicellular organisms? *Unicellular organisms grow by increasing their cell size, whereas multicellular organisms grow by increasing their number of cells.*
