Chronic Wound Care Diane Krasner, 1990 Chronic Wound Management Raj Mani, 2023-04-27

This book describes how chronic wounds follow a completely different healing trajectory to acute wounds and discusses the factors associated with these poor healing trajectories These factors include age chronic inflammation phenotypic changes in such cells as macrophages fibroblasts and keratinocytes colder alkaline wound milieu wound related hypoxemia and diabetes Other factors implicated include reperfusion injury poor patient compliance presence of undiagnosed and therefore unmanaged biofilms and wound pain The past decades have yielded reliable evidence based guidelines and standardized care but the healing of diabetic foot wounds continues to be unpredictable notwithstanding these advances while the recurrence rates are also high The benefits of technology in wound diagnosis are evidence based and the use of this technology also features in guidelines However the same argument cannot be extended to adjuvant devices to facilitate wound closure even though many devices potentially benefit wound healing Chronic Wound Management describes how innovation is based on technology that itself informs evidence the gap between the evidence available the performance of technology and how do we bridge this gap It reviews the lessons learnt from the COVID 19 pandemic and whether traditional medicine systems offer us real or imaginary benefits Consequently this book is an important addition to the literature in the area and an essential read
