## Transcriptional Control

**Specification Link:** Genomes 6.3.2

**Transcription:**  
This is the first stage of gene expression. It is the process by which the information in a gene is used to produce an RNA molecule. This is done by copying the DNA sequence into a complementary RNA sequence. The RNA molecule is then used to produce a protein.

**Diagram:** A diagram showing a DNA double helix with a transcription bubble. RNA polymerase is shown moving along the DNA, synthesizing an mRNA strand. Labels include: DNA, RNA polymerase, mRNA, and Transcription bubble.

**Task:**  
1. Read the information carefully.  
2. Write the answer in your book.

## Post-transcriptional Control

**Specification Link:** Genomes 6.3.2

**RNA Processing:**  
The process of converting a primary transcript into a mature mRNA molecule. This involves the removal of introns and the joining of exons. The mature mRNA is then used to produce a protein.

**Diagram:** A diagram showing the process of RNA processing. A primary transcript with introns and exons is shown. An arrow points to a mature mRNA molecule where the introns have been removed and the exons joined together. Labels include: Primary transcript, Intron, Exon, and Mature mRNA.

**Specification Link:** Genomes 6.3.2

**Translation:**  
The process by which the information in an mRNA molecule is used to produce a protein. This involves the assembly of amino acids into a polypeptide chain. The polypeptide chain is then folded into a specific shape to form a functional protein.

**Diagram:** A diagram showing the process of translation. An mRNA molecule is shown being read by a ribosome. Amino acids are being added to a growing polypeptide chain. Labels include: mRNA, Ribosome, and Polypeptide chain.

## Control of Gene Expression

**Specification Link:** Genomes 6.3.2

**Diagram:** A large diagram showing the control of gene expression. It includes labels for DNA, RNA, Protein, Transcription, Translation, and various regulatory mechanisms like methylation, acetylation, and phosphorylation. The diagram shows how these mechanisms can turn genes 'on' or 'off'.

*Bibliography of Agriculture*, 1988-12      Regulation of Gene Expression Gary H. Perdew, Jack P. Vanden Heuvel, Jeffrey M. Peters, 2008-08-17 The use of molecular biology and biochemistry to study the regulation of gene expression has become a major feature of research in the biological sciences Many excellent books and reviews exist that examine the experimental methodology employed in specific areas of molecular biology and regulation of gene expression However we have noticed a lack of books especially textbooks that provide an overview of the rationale and general experimental approaches used to examine chemically or disease mediated alterations in gene expression in mammalian systems For example it has been difficult to find appropriate texts that examine specific experimental goals such as proving that an increased level of mRNA for a given gene is attributable to an increase in transcription rates Regulation of Gene Expression Molecular Mechanisms is intended to serve as either a textbook for graduate students or as a basic reference for laboratory personnel Indeed we are using this book to teach a graduate level class at The Pennsylvania State University For more details about this class please visit <http://moltox.cas.psu.edu> and select Courses The goal for our work is to provide an overview of the various methods and approaches to characterize possible mechanisms of gene regulation Further we have attempted to provide a framework for students to develop an understanding of how to determine the various mechanisms that lead to altered activity of a specific protein within a cell

Gene Regulation Bert W. O'Malley, 1982      *Translational Control of Gene Expression* Nahum Sonenberg, John W. B. Hershey, Michael B. Mathews, 2001 Since the 1996 publication of *Translational Control* there has been fresh interest in protein synthesis and recognition of the key role of translation control mechanisms in regulating gene expression This new monograph updates and expands the scope of the earlier book but it also takes a fresh look at the field In a new format the first eight chapters provide broad overviews while each of the additional twenty eight has a focus on a research topic of more specific interest The result is a thoroughly up to date account of initiation elongation and termination of translation control mechanisms in development in response to extracellular stimuli and the effects on the translation machinery of virus infection and disease This book is essential reading for students entering the field and an invaluable resource for investigators of gene expression and its control      Control of Plant Gene Expression Desh Pal S. Verma, 1993 *Control of Plant Gene Expression* is a comprehensive volume describing the regulation and control of specific plant genes expressed in different tissues during plant development It addresses several fundamental aspects of plant gene regulation including signal transduction mechanisms and the role of plant hormones It also discusses the structure and regulation of important metabolic genes such as those involved in nitrogen and carbon assimilation lipid biosynthesis and secondary metabolism The book provides excellent examples of genetic engineering applications to alter agronomically important traits making it an essential reference volume for plant molecular biologists and plant biotechnologists It also contains a wealth of information that will be valuable to students specializing in plant molecular biology plant development gene regulation in plants molecular plant physiology or plant biotechnology      Control of Gene Expression; [Proceedings] Edited by Alexander Kohn and Adam Shatkay "Oholo" Biological Conference on Strategies for the Control of Gene Expression, 18Th, Zikhron Yaaqov, Israel, 1973, Adam Shatkai (Ed), Alexander Kohn (Ed), 1974      *Long-range Control of Gene Expression* Aghajan, Cavallaro, 2008 Not Available      **Gene Expression During Cell Differentiation** John Bertrand Gurdon, 1978

increased copy number of whole chromosome sets in the genome is a common cellular state in evolution development and disease Polyploidy enlarges cell size and alters gene expression producing novel phenotypes and functions Although many polyploid cell types have been discovered it is not clear how polyploidy changes physiology Specifically whether the enlarged cell size of polyploids causes differential gene regulation has not been investigated In this thesis I present the evidence for a size sensing mechanism that alters gene expression in yeast My results indicate a causal relationship between cell size and gene expression Ploidy associated changes in the transcriptome therefore reflect transcriptional adjustment to a larger cell size The causal and regulatory connection between cell size and transcription suggests that the physical features of a cell such as size and shape are a systematic factor in gene regulation In addition cell size homeostasis may have a critical function maintenance of transcriptional homeostasis
