Understanding the Universe James B. Seaborn, 2012-12-06 For the last eighteen years I have been teaching an introductory course in astrophysics The course is intended for nonscience majors satisfying a general education requirement in natural science It is a physics course with applications in astronomy The only prerequisite is the high school mathematics required for admission to the university For a number of years I used an astronomy text which I supplemented with lecture notes on physics There are many good astronomy texts available but this was not a satisfactory state of affairs since the course is a physics course The students needed a physics text that focused on astronomical applications Over the last few years I have developed a text which my students have been using in manuscript form in this course This book is an outgrowth of that effort The purpose of the book is to develop the physics that describes the behavior of matter here on the earth and use it to try to understand the things that are seen in the heavens Following a brief discussion of the history of astronomy from the Greeks through the Copernican Revolution we begin to develop the physics needed to understand three important problems at a level accessible to undergraduate nonscience majors 1 the solar system 2 the structure and evolution of stars and 3 the early universe All of these are related to the fundamental problem of how matter and energy behave in space and time
