Gardening is a great process that you can choose to partake in. Many people love how relaxing the whole process can be and how much they can connect with the earth and have some fun. Plus, it is always wonderful to taste the fresh produce at the end of the season when it comes straight from your own garden. Traditional gardening is a challenge though. You are trying to fight with the bugs, the bad nutrients in the soil, and the weeds to keep the plants growing the way that they should. Many people give up on the work because it is just too hard to get the great-looking crop that you are looking for. Rather than fighting with all of this, consider growing a hydroponic garden to get even better results. Hydroponic gardening doesn't use soil like traditional gardening. Instead, you will pick out some special containers and an irrigation system in order to work with just water to keep the plants healthy. By adding in a little bit of nutrient solution to the water and adding a pump to move around the water, you will be able to provide the plants with everything they need without having to fight with the soil and other issues that are present. Anybody can do this process as it is not difficult, and this guidebook is going to go through all of the steps that are needed to make it work for you. From understanding more about this process to picking out the right

Hydroponic Garden Secrets Tyler Water,2020-12-04 B W EDITION Do you want to discover a scientific technique for building your own hydroponic garden Then keep reading Hydroponics is a means of growing plants without soil It makes use of nutrient rich water or a nutrient solution as well as techniques that allow the plant to grow You can also use sand or gravel with added nutrients In this chapter you are going to learn the history of the growing art that we call hydroponics You will also learn about some of its practical uses throughout history Traditionally the soil is used to grow plants It was thought that soil was necessary since plants started out in the earth with nutrient rich soils like the strawberry plants that were first grown in the wild before being cultivated for gardens At some point in history it was discovered that the soil was not necessary for the growing process Rather the role of soil is to act as a reservoir to hold the nutrients that a plant needs in order to grow Crops grown hydroponically according to studies grow faster and healthier and are better than crops grown on soil this is because they would not have to go through a lot of disadvantages that the soil may present such as situations of a break out of a soil borne disease in the area the struggle to have to push its way through the soil during germination the attack from organism and pests that live in the soil And of course the plants in hydroponic systems do not have to hustle for nutrients and water because this is basically what they are planted in in hydroponic systems water based mineral nutrient solutions Hydroponics also helps you save water which sounds a bit strange when you think of water is essential for this process Usually it s every alternate day so that the soil soaks up the water and is transported to the roots That sounds fine doesn t it But that s only a portion of the big picture Some of the water is bound to seep out of the container some of it evaporates and a portion of it seeps further into the soil beyond the plant s roots So in practice the plant essentially only uses up a small portion of the water Hydroponics uses a simple recirculating mechanism that ensures that the water is fully soaked up by the roots It means that the portion of water that isn t absorbed by the plant is directly sent to

the reservoir The same water from the reservoir is later pumped up to the plants Since the reservoir is shut tight there is no chance for the water to evaporate and it certainly will not seep out of the bottom of the container You can save around 80% of the water by switching to hydroponics instead of using regular soil gardening This book covers the following topics Equipment Hydroponic Growing System Plant necessities Best plant for hydroponics Pest and disease Choosing the right site for your garden Maintenance of your hydroponic garden And Much More Do not get scared hydroponic gardening is not as complicated tricky and demanding as your mind is about to convince you that it is on the contrary it is very simple And this is what this book is about to enlighten you and get you started on having your own hydroponic garden Ready to get started Click Buy Now

- 1 Substrates The substrate is the material that anchors your plant s roots As this farming is carried out without the soil you need to replace it with such material which can retain moisture provide firm support and foster aeration The substrate is made up of a combination of certain things including clay pebbles peat moss oyster shells coconut fiber lava rocks and grow stones There are many varieties of substrates It solely depends on the plant that you would be growing in the hydroponic system to decide which substrate you are going to choose
- 2 Nutrients Nutrients are one of the primary sources for the growth which is required by the plants Providing the appropriate mixture of the nutrient mix in the right amount of water is a must The plants only depend upon the precise water nutrient mixture to survive and grow since there is no soil You can buy commercial nutrient solutions which are available in the market whereas you can even make the nutrients yourself in your home
- 3 Maintenance Your nutrient solutions need to be checked frequently to ensure the right amount of pH is being dispersed among the plants If the pH is high or low it will not let the plant to uptake the nutrients in a thorough manner Oxygen levels and the temperature also need to be checked regularly Many hydroponics systems require the water to be changed clean and maintaining the equipment to stave off parasites or mold Let s know about the crucial equipment needed for a successful hydroponic design We will also discuss how to get effective results from hydroponics You will need to choose the best equipment to ensure the success of hydroponic gardening Are you ready to build your very own hydroponic garden That s right I ve created this book in order to share my knowledge to you
