

BIOL 107 Lab 1 Assignment sheet - The Scientific Method and the Metric System

The scientific method

1. (2 pts) You grow tomato plants but you notice that your neighbor's tomato plants are big and healthy with lots of delicious-looking tomatoes while yours are small and sickly. You know that your neighbor fertilizes their plants regularly whereas you never fertilize. Propose a testable hypothesis regarding tomato plant growth and the use of fertilizer. Briefly describe an experiment to test this hypothesis. Be sure to name independent and dependent variables and include any control variables.

The scientific method begins with the observation that there is a difference between my tomatoes and my neighbor's tomatoes size. I would then question as to why there is a difference and come up with the hypothesis that, is it the possibility that not utilizing fertilizer negatively affects the health and size of the fertilizer. Hypothesis: If I use fertilizer, then my tomatoes will be healthier in terms of size and looks. Independent variable: the type and quantity of fertilizer, sunlight, and water used. Dependent variable, the growth of tomato plant.

Molecular Biology of the Cell, 2003 **Hypercholesterolemia, Hypocholesterolemia, Hypertriglyceridemia, in Vivo Kinetics** Claude L. Malmendier, P. Alaupovic, H. Bryan Brewer, 2013-03-13 The past two decades have seen steady progress in our understanding of the pathogenesis of atherosclerosis The role of low density lipoprotein LDL increase and of LDL receptor deficiency or malfunctions in familial hypercholesterolemia has been largely enlightened by the works of Brown and Goldstein These authors postulated also that modification of LDL to a form recognized by the scavenger or acetyl LDL receptor may be required for lipid loading of macrophage derived foam cells in the lesions A growing body of evidence suggests that oxidative modification of LDL could enhance its atherogenicity by its implication as a factor in the generation of foam cells Thus if the role of LDL in the pathogenesis of hypercholesterolemia was

well established a great deal of information appears currently on new approaches such as the mechanisms leading to the accumulation of foam cells the impact of LDL structural alterations notably oxidation and the role of gene mutations of apolipoprotein Band or LDL receptor The opening topic is devoted to these new avenues outlined in the field of hypercholesterolemia The first part concerns the genetic aspects of atherosclerosis mainly the genetics of apo 1 lipoproteins in their transcriptional regulation the amino acid mutations of the apo B gene and of the LDL receptor gene the structural domains and the acylation sites of apoprotein B
