

## Cell Biology Unit Study Guide - Answer Key

1. A student could tell the difference between onion skin cells and cheek cells because the onion skin cells have a cell wall and chloroplasts
2. What is the difference between a prokaryotic and a eukaryotic cell? Prokaryotes have no membrane-bound organelles
3. Why does a virus require a host cell? Because they are not able to make proteins on their own
4. What type of organisms are prokaryotes? bacteria
5. The function of a cell membrane is to (1) control what enters and leaves the cell, (2) support the shape of the cell, and (3) contain identification markers for other cells.
6. In the final phase of completion, proteins are modified by special enzymes in what organelle? Golgi apparatus
7. In which organelle would water and dissolved materials be stored? vacuole
8. Describe the structure and function of the following organelles: endoplasmic reticulum, ribosomes, Golgi apparatus, mitochondrion.  
(a) ER - network of interconnected membranes forming sacs and canals; transports proteins,  
(b) ribosomes - ribosomal RNA; site of protein synthesis  
(c) Golgi apparatus - membranous sacs; modify and package proteins  
(d) mitochondrion - membranous sacs; produces ATP
9. Osmosis is defined as the movement of water molecules from a high concentration to a low concentration through a selectively permeable membrane.
10. The structure and function of membrane proteins are described as globular proteins that create narrow passageways or channels for molecule transport.
11. The cellular structure that is involved in producing ATP during aerobic respiration is the mitochondrion.
12. The membrane-bound organelles which convert solar energy to chemical energy are? chloroplasts
13. What is the function of the nucleus?  
(a) stores DNA  
(b) controls most of the cell's processes  
(c) contains the information needed to make proteins

**How to mainstream sustainability and circularity into the bioeconomy?** Food and Agriculture Organization of the United Nations, 2021-08-31 In its 2020 communique the International Advisory Council on Global Bioeconomy has urged to strengthen good practices and policies to advance the global bioeconomy. The transition from a fossil based economy to a bioeconomy happens at three levels: technological, organizational and social. In particular, agri food systems are key to achieve a shift to sustainable and circular production and consumption patterns since they occupy the biggest share of the bioeconomy from an economic value added perspective as well as having potential for discovery and innovation. This Compendium outlines 250 sources of good practices and policies. It covers the entire continuum of economic sectors that have a stake in biological knowledge and resources. The Compendium therefore highlights the wide range of aspects that are included in the concept of the bioeconomy. Being an inherently multisectoral process that involves potential synergies and trade offs among different sustainability objectives, the implementation of bioeconomy strategies presents greater challenges than activities that are focused on a single sector. The report also shows how good practices and policies contribute to the translation of bioeconomy strategies into coordinated actions for the achievement of local priorities and sustainability goals while also addressing global issues. Overall, the review identifies a knowledge gap. Assessments do not always indicate if practices and policies have enough evidence of impact to be recommended as models that contribute to sustainability objectives of the bioeconomy. To address this, a context specific approach described in Chapter 5 provides support for countries to make evidence based decisions on policies and investments for the bioeconomy. The approach helps to identify good practices and policies ex ante which can help achieve common sustainability objectives of bioeconomy strategies that were presented in the 2019 FAO report Towards sustainable bioeconomy. Lessons learned from case studies. Taken together, this Compendium and the 2019 report provide practical guidelines and resources that can support decision makers and stakeholders in bioeconomy systems to make progress towards reaching sustainable outcomes
