Lucas,Carlo Poloni,Nicola Beume,2008-09-16 This book constitutes the refereed proceedings of the 10th International Conference on Parallel Problem Solving from Nature PPSN 2008 held in Dortmund Germany in September 2008 The 114 revised full papers presented were carefully reviewed and selected from 206 submissions The conference covers a wide range of topics such as evolutionary computation quantum computation molecular computation neural computation artificial life swarm intelligence artificial ant systems artificial immune systems self organizing systems emergent behaviors and applications to real world problems The paper are organized in topical sections on formal theory new techniques experimental analysis multiobjective optimization hybrid methods and applications Innovative Computational Intelligence: A Rough Guide to 134 Clever Algorithms Bo Xing,Wen-Jing Gao,2013-12-13 The first notable feature of this book is its innovation Computational intelligence CI a fast evolving area is currently attracting lots of researchers attention in dealing with many complex problems At present there are quite a lot competing books existing in the market Nevertheless the present book is markedly different from the existing books in that it presents new

paradigms of CI that have rarely mentioned before as opposed to the traditional CI techniques or methodologies employed in other books During the past decade a number of new CI algorithms are proposed Unfortunately they spread in a number of unrelated publishing directions which may hamper the use of such published resources These provide us with motivation to analyze the existing research for categorizing and synthesizing it in a meaningful manner The mission of this book is really important since those algorithms are going to be a new revolution in computer science We hope it will stimulate the readers to make novel contributions or even start a new paradigm based on nature phenomena Although structured as a textbook the book s straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners We believe that the book will be instrumental in initiating an integrated approach to complex problems by allowing cross fertilization of design principles from different design philosophies The second feature of this book is its comprehensiveness Through an extensive literature research there are 134 innovative CI algorithms covered in this book
