Quantitative Analysis for Management Barry Render, Ralph M. Stair, 1988 **Architectural, Construction, Environmental and Digital Technologies for Future Cities** Natalia Potienko, Elena Ahmedova, Antonina Karlina, Vladimir Faerman, 2022-04-27 This book offers an overview of Russian and international experience in developing the concept of future cities and its practical implementation The concept of future cities is associated with several important trends The first trend is the sustainable development of the urban environment and the implementation of eco friendly technologies and materials in civil construction industrial and power plants The harmonious coexistence of the citizens with all forms of nature in the urban habitat becomes a great value The second trend is the individualization of the aesthetical and architectural image of the future cities The city s unique flavor based on the blending of the historical legacy and architectural traditions is now as important as the utility of the environment The third trend is the digitalization of the urban environment with the use of state of the art sensors information and communication technologies and data science The efficiency of operations and

services achieved by the extensive use of complex IoT networks becomes a value as well. The last trend is the adaptation of the urban and social environment for individual demands of a community and a person. Individual comfort and safety are now more important than ever before. By addressing these trends, the volume discusses local and international plans, practices, and technologies aimed at the development and implementation of future cities.

Understanding Political Science Research Methods Maryann Barakso, Daniel M. Sabet, Brian Schaffner, 2013-12-04. This text starts by explaining the fundamental goal of good political science research: the ability to answer interesting and important questions by generating valid inferences about political phenomena. Before the text even discusses the process of developing a research question, the authors introduce the reader to what it means to make an inference and the different challenges that social scientists face when confronting this task. Only with this ultimate goal in mind will students be able to ask appropriate questions, conduct fruitful literature reviews, select and execute the proper research design, and critically evaluate the work of others. The authors' primary goal is to teach students to critically evaluate their own research designs and others and analyze the extent to which they overcome the classic challenges to making inference: internal and external validity concerns, omitted variable bias, endogeneity, measurement sampling, and case selection errors, and poor research questions or theory. As such, students will not only be better able to conduct political science research but they will also be more savvy consumers of the constant flow of causal assertions that they confront in scholarship, in the media, and in conversations with others. Three themes run through Barakso, Sabet, and Schaffner's text: minimizing classic research problems to making valid inferences, effective presentation of research results, and the nonlinear nature of the research process. Throughout their academic years and later in their professional careers, students will need to effectively convey various bits of information. Presentation skills gleaned from this text will benefit students for a lifetime, whether they continue in academia or in a professional career. Several distinctive features make this book noteworthy. A common set of examples threaded throughout the text gives students a common ground across chapters and exposes them to a broad range of subfields in the discipline. Box features throughout the book illustrate the nonlinear, non-textbook reality of research, demonstrate the often false inferences and poor social science in the way the popular press covers politics, and encourage students to think about ethical issues at various stages of the research process.
