Modern Theories and Practices for Cyber Ethics and Security Compliance Yaokumah, Winfred, Rajarajan, Muttukrishnan, Abdulai, Jamal-Deen, Wiafe, Isaac, Katsriku, Ferdinand Apietu, 2020-04-10 In today's globalized world businesses and governments rely heavily on technology for storing and protecting essential information and data. Despite the benefits that computing systems offer, there remains an assortment of issues and challenges in maintaining the integrity and confidentiality of these databases. As professionals become more dependent on cyberspace, there is a need for research on modern strategies and concepts for improving the security and safety of these technologies. *Modern Theories and Practices for Cyber Ethics and Security Compliance* is a collection of innovative research on the concepts, models, issues, challenges, innovations, and mitigation strategies needed to improve cyber protection. While highlighting topics including database governance, cryptography, and intrusion detection, this book provides guidelines for the protection, safety, and security of business data and national infrastructure from cyber attacks. It is ideally designed for security analysts, law enforcement researchers, legal practitioners, policymakers, business professionals, governments, strategists, educators, and students seeking current research on combative solutions for cyber threats and attacks.

**Data-Based Radiation Oncology - Design of Clinical Trials** Kerstin A. Kessel, Anne W.

Lee, Søren M. Bentzen, Bhadrasain Vikram, Fridtjof Nuesslin, Stephanie E. Combs, 2018-04-12 In radiation oncology as in many other specialties clinical trials are essential to investigate new therapy approaches Usually preparation for a prospective clinical trial is extremely time consuming until ethics approval is obtained To test a new treatment usually many years pass before it can be implemented in the routine care During that time already new interventions emerge new drugs appear on the market technical physical innovations are being implemented novel biology driven concepts are translated into clinical approaches while we are still investigating the ones from years ago Another problem is associated with molecular diagnostics and the growing amount of tumor specific biomarkers which allows for a better stratification of patient subgroups On the other side this may result in a much longer time for patient recruiting and consequently in larger multicenter trials Moreover all of the relevant data must be readily available for treatment decision making treatment as well as follow up and ultimately for trial evaluation This challenges even more for agreed standards in data acquisition quality and management How could we change the way currently clinical trials are performed in a way they are safe and ethically justifiable and speed up the initiation process so we can provide new and better treatments faster for our patients Further while we rely on various quantitative information handling distributed large heterogeneous amounts of data efficiently is very important Thus data management becomes a strong focus A good infrastructure helps to plan tailor and conduct clinical trials in a way they are easy and quickly analyzable In this research topic we want to discuss new ideas for intelligent trial designs and concepts for data management
