Ec2028 Internet Java Qn:

Programming the Internet with Java Darrel Ince, Adam Freeman, 1997 Programming the Internet with Java is designed to teach students how to program in Java in particular those concepts that relate to the burgeoning arena of Internet technologies. It assumes previous knowledge of programming in a procedural language such as C or Pascal and begins with an introduction to Java and the basics of object oriented programming. It progresses onto classes, exceptions, libraries, and threads and teaches the skills to develop complex Java code. Further chapters then go on to apply these lessons to Internet programming requirements so that by the end of the book the student will be familiar with the fundamentals of network programming and database access as well as skilled at developing applets and applications. Features: Numerous programming examples drawn from appropriate Internet technologies such as firewalls, log files, and web crawlers. Self assessment questions guide the student through the book and measure progress. Boxed out definitions of important Internet concepts. Teaching material slides and solutions available online. Supporting web site is available for downloading and contains code exercises available shortly. Multiple choice self assessment test applets. Java 1.1 updates and links to other useful sites. 0201175495B04062001

Java Network Programming and Distributed Computing David Reilly, Michael Reilly, 2002 Java's rich comprehensive networking interfaces make it an ideal platform for building today's networked Internet centered applications, components, and Web services. Now two Java networking experts demystify Java's complex networking API, giving developers practical insight into the key techniques of network development and providing extensive code examples that show exactly how it's done. David and Michael Reilly begin by reviewing fundamental Internet architecture and TCP/IP protocol concepts all network programmers need to understand, as well as general Java features and techniques that are especially important in network programming such as exception handling and input/output. Using practical examples they show how to write clients and servers using UDP and TCP, how to build multithreaded network applications, and how to utilize HTTP and access the Web using Java. The book includes detailed coverage of server side application development, distributed computing development with RMI and CORBA, and email enabling applications with the powerful JavaMail API. For all beginning to intermediate Java programmers, network programmers who need to learn to work with Java.

Essential Java Fast John Cowell, 1997-02-18 Java is a new and exciting object oriented programming language which is set to transform the world wide web. Java allows users to write applications which can be accessed across different platforms and provides an effective means of building small but powerful programs that enable a huge range of new applications such as animation, live updating, two way interactions, etc. to be quickly and easily implemented. As with all the Essential Series books, Essential Java Fast provides a highly readable and accessible introduction to the Java programming language, allowing the reader to get up and running fast when developing their own programs. Software developers producing software for the Internet, those writing substantial commercial applications in a Windows environment, as well as individuals

wanting to produce single versions of an application to run on any platform should read this book from cover to cover
