Artificial Intelligence for Customer Relationship Management Boris Galitsky, 2020-12-07 This research monograph brings AI to the field of Customer Relationship Management (CRM) to make a customer experience with a product or service smart and enjoyable. AI is here to help customers to get a refund for a canceled flight, unfreeze a banking account, or get a health test result. Today CRM has evolved from storing and analyzing customers' data to predicting and understanding their behavior by putting a CRM system in a customer's shoes. Hence, advanced reasoning with learning from small data about customers' attitudes, introspection, reading between the lines of customer communication, and explainability need to come into play. Artificial Intelligence for Customer Relationship Management leverages a number of Natural Language Processing (NLP), Machine Learning (ML), simulation, and reasoning techniques to enable CRM with intelligence. An effective and robust CRM needs to be able to chat with customers, providing desired information, completing their transactions, and resolving their problems. It introduces a systematic means of ascertaining a customer's frame of mind, their intents, and attitudes to determine when to provide a thorough answer, a recommendation, an explanation, a proper argument, timely advice, and promotion or compensation. The author employs a spectrum of ML methods from deterministic to statistical, to deep, to predict customer behavior and anticipate possible complaints, assuring customer retention efficiently. Providing a forum for the exchange of ideas in AI, this book provides a concise yet comprehensive coverage of methodologies, tools, issues, applications, and future trends for professionals, managers, and researchers in the CRM field, together with AI and IT professionals.
