Federal Register, 2005-08 **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1973 **Multitasking: Executive Functioning in Dual-Task and Task Switching Situations** Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27 Multitasking refers to performance of multiple tasks The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching In the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations However these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents The present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations The contributions specify these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and or 3 their plasticity as a response to practice and training **Molecular Methods in Developmental Biology** Matt Guille, 2008-02-03 The process whereby a single cell the fertilized egg develops into an adult has fascinated for centuries Great progress in understanding that process h ever has been made in the last two decades when the techniques of molecular biology have become available to developmental biologists By applying these techniques the exact nature of many of the interactions responsible for forming the body pattern are now being revealed in detail Such studies are a large and it seems ever expanding part of most life science groups It is at newcomers to this field that this book is primarily aimed A number of different plants and animals serve as common model org isms for developmental studies In **Molecular Methods in Developmental Bi ogy** *Xenopus* and Zebrafish a range of the molecular methods applicable to two of these organisms are described these are the South African clawed frog *Xenopus laevis* and the zebrafish *Brachydanio rerio* The embryos of both of these species develop rapidly and externally making them particularly suited to investigations of early vertebrate development However both *Xenopus* and zebrafish have their own advantages and disadvantages *Xenopus* have large robust embryos that can be manipulated surgically with ease but their pseudotetraploidy and long generation time make them unsuitable candidates for genetics This disadvantage may soon be overcome by using the diploid *Xenopus tropicalis* and early experiments are already underway The transparent embryos of zebrafish render them well suited for in situ hybridization and immunohistochemistry and good for observing mutations in genetic screens **Modern Trends in Diseases of the Ear, Nose, and Throat** Maxwell Ellis, 1972 **Wisconsin Pesticide Applicator Training Manual** Steve Tomasko, 2009 **Congenital Heart Disease** Mary Kearns-Jonker, 2008-02-02 Prominent researchers and clinicians describe in detail all the latest laboratory techniques currently used to define the molecular genetic basis for congenital

malformations of the heart cardiomyopathies cardiac tumors and arrhythmias in human patients In particular the methods can be used to identify in clinical samples those genetic mutations responsible for such congenital abnormalities as Marfan syndrome Williams Beuren Syndrome Alagille syndrome Noonan syndrome and Friedreich ataxia The authors also discuss the limitations of identifying patients with congenital heart disease using these techniques during both pre and postnatal periods
