Crocus SHDSL

The Crocus SHDSL (Single-pair High bit rate Digital Subscriber Line) is a new-generation manageable baseband modem offering full duplex transmission up to 2.3 Mbps over a single two-wire unconditioned unshielded twisted-pair cable.

A special 2-pair version offers the possibility to extend the speed range to 4.6 Mbps. The line speed of the modem can be adapted to optimise the throughput as a function of the characteristics of the local loop. The equipment is based on a new modulation technology called TC-PAM (Trellis Coded Pulse Amplitude Modulation), which guarantees higher speeds and longer loop performance. The TC-PAM modulation also guarantees spectral compatibility with legacy and ADSL transmission systems in the same cable bundle, offering an attractive solution for high-speed backbone access, for LAN to LAN connections, as well as for imaging and other bandwidth-demanding applications.

A complete range of plug-in interface boards makes the Crocus SHDSL ideal for interfacing with almost every application. Not only traditional serial interfaces like V.35, V.36, RS-530 and X.21 (configurable for Nx64 kbps operation), but also G703 (transparent or with G.704 framing) and direct Ethernet 10BaseT connections with integrated bridge or router functionality are available. All these interface boards can be exchanged in only a few seconds, so flexibility is maximised.

For large concentration sites, rack-mount versions are mounted in a standard 19" card-nest and can offer densities of up to 30 modems per nest. Both 230V/115 V ac and direct 48 Vdc powering can be used.

With a free user-friendly graphical Windows® application, the operator can configure the local or remotely installed equipment. It is a valuable tool for the field engineer as it supports performance monitoring, retrieval of statistics and troubleshooting. Alternatively one can obtain a comparable functionality through the use of a VT100 terminal or by connecting an external LCD hand terminal. The Crocus SHDSL also offers an automatic installation mode, which allows standard configurations to be set up in only a few seconds.

For larger networks, the Crocus SHDSL can be managed with a management application running on the SNMP based HP OpenView® management platform. On this platform one can combine the management of the Crocus SHDSL with the management of all Telindus and many third party equipment.

The integrated management allows one to configure the modem remotely, to query the actual status of the modems, to permanently monitor the performance (real-time and statistical information), to conduct fault analysis, and to report alarms to the operator.
