The ASTD E-learning Handbook Allison Rossett, 2002 The entire training industry is undergoing dramatic change as training is moved out of traditional classrooms and onto the Web Training publications and conferences are now dominated by speakers writers and vendors talking about e Learning The e Learning revolution is forcing companies to spend millions on new technology and new web based courseware threatening the role of traditional classroom trainers and saving companies millions of dollars in housing and travel costs because trainees no longer need a

plane ticket and 3 nights accommodation to attend a corporate training program the training can be delivered to each learner's desktop over the Web. But because e Learning is still in the revolution stage there are no clear standards and models for how to create and deliver e Learning successfully. Everyone is asking the same questions: how does web based training fit in with traditional classroom based training? What are the standards for designing high quality e Learning? How much interaction with an instructor do e Learning participants need? What is the role of the instructional designer in online learning? The ASTD e Learning Yearbook will be the first annual reference.

Artificial Intelligence in Business, Science, and Industry: Fundamentals Wendy B. Rauch-Hindin, Harvey J. Hindin, 1985

Artificial Intelligence George F. Luger, William A. Stubblefield, 1998. This text is a treatment of the foundations of Artificial Intelligence combining theoretical material required for intelligent problem solving with the data structures and algorithms needed for implementation.

Guide for the Management of Expert Systems Development Rand Corporation, 1989. This report was prepared to assist managers in the risk managed application of expert systems ES technology. Two problems that have frustrated managers and technicians who might otherwise be interested in exploring ES solutions are the seeming lack of a software engineering discipline for creating and maintaining expert systems and the fact that the software development risks associated with expert systems have not been clearly addressed. This guide focuses on ES development as a software engineering endeavor and emphasizes that as such it should be subject to much the same discipline as conventional automated information system software. The guide is meant to be used in conjunction with accepted software development methods and standards such as Department of Defense DOD Standards 2167A and 7935.1 DOD Directive 7920.1 DOD Instruction 7920.2 and the OSD Major Automated System Review Council MAISRC Guidelines for Program Managers. This document presents a step by step guideline that addresses the managerial and technical risks of each phase in the software development life cycle of systems that contain ES components.
