Continuum Mechanics And Applications In Geophysics And The Environment:

Continuum Mechanics and Applications in Geophysics and the Environment Brian Straughan, Ralf Greve, Harald Ehrentauf, Yongqi Wang, 2013-03-09 This book is dedicated to Professor Kolumban Hutter of the Darmstadt University of Technology on the occasion of his 60th birthday on 22 January 2001. Professor Hutter graduated in Civil Engineering from the ETH Zurich and then worked in industry related consulting at the Institute of Mechanics and the Laboratory of Hydraulics and Soil Mechanics at the ETH before embarking on a PhD in Theoretical and Applied Mechanics in Cornell University. He duly completed his PhD under the supervision of Professor Y. H. Pao working in the field of the electrodynamics of continuous media. After his PhD, Professor Hutter returned to Europe where he worked as a senior scientist at the Laboratory for Hydraulics, Hydrology and Glaciology, ETH Zurich, being involved in glacier flow, physical limnology, avalanche research and granular media. At the same time, he maintained scientific contact with the Mechanics Institute of the Vienna University of Technology. In both European cities, he received a habilitation degree. In Vienna for Mechanics, in Zurich for Theoretical Glaciology and Limnology. Since 1987, Professor Hutter has been the successor to Professor Becker at the Department of Mechanics, Darmstadt University of Technology. Professor Hutter's work has always been relevant to real life and a feature of the man is his attention to experiments and matching theory. He has built up an internationally respected laboratory in Darmstadt which concentrates on both experimental and theoretical aspects. **Practical Handbook of Soil, Vadose**

Zone, and Ground-Water Contamination J. Russell Boulding, Jon S. Ginn, 2016-04-19 A synthesis of years of interdisciplinary research and practice, the second edition of this bestseller continues to serve as a primary resource for information on the assessment, remediation and control of contamination on and below the ground surface. **Practical Handbook of Soil, Vadose Zone and Ground Water Contamination Assessment** Prev **Mathematical Reviews**, 2003

Environmental Geomechanics Bernhard A. Schrefler, 2001-11-07 Environmental Geomechanics covers a broad class of problems where deforming geomaterials are involved, usually coupled with fluid flow and transport of some substance. Transport of contaminants and other substances may occur in the fluids, e.g. water, water vapour and air filling the pores of geomaterials, as happens in waste disposal problems or durability problems. Mass transport also takes place in reservoir engineering problems where the fluids involved are oil, water and gas. All these aspects are addressed in this book together with a theoretical framework. , 2004 **Continuum Mechanics in Environmental Sciences and Geophysics** K. Hutter, 2014-05-04 Modern continuum mechanics is the topic of this book. After its introduction, it will be applied to a few typical systems arising in the environmental sciences and in geophysics. In large lake/ocean dynamics, peculiar effects of the rotation of the Earth will be analyzed in linear/nonlinear processes of a homogeneous and inhomogeneous water body. Strong thermomechanical coupling paired with nonlinear rheology affects the flow of large ice sheets such as Antarctica and Greenland and ice shelves. Its response to the climatic forcing in an environment of greenhouse warming may significantly

affect the life of future generations The mechanical behavior of granular materials under quasistatic loadings requires non classical mixture concepts and encounters generally complicated elastic plastic type constitutive behavior Creeping flow of soils consolidation processes and ground water flow are described by such theories Rapid shearing flow of granular materials lead to constitutive relations for the stresses which incorporate rate independent behavior of Mohr Coulomb type together with dispersive stress contributions due to particle collisions Rockfalls sturzstroms snow and ice avalanches but also debris flow and sea ice drifting can be described with such formulations *Aquananotechnology* David E. Reisner,T.

Pradeep,2014-09-24 The world s fresh water supplies are dwindling rapidly even wastewater is now considered an asset By 2025 most of the world s population will be facing serious water stresses and shortages *Aquananotechnology* Global Prospects breaks new ground with its informative and innovative introduction of the application of nanotechnology to the remediation of contaminated water for drinking and industrial use It provides a comprehensive overview from a global perspective of the latest research and developments in the use of nanotechnology for water purification and desalination methods The book also covers approaches to remediation such as high surface area nanoscale media for adsorption of toxic species UV treatment of pathogens and regeneration of saturated media with applications in municipal water supplies produced water from fracking ballast water and more It also discusses membranes desalination sensing engineered polymers magnetic nanomaterials electrospun nanofibers photocatalysis endocrine disruptors and Al₁₃ clusters It explores physics based phenomena such as subcritical water and cavitation induced sonoluminescence and fog harvesting With contributions from experts in developed and developing countries including those with severe contamination such as China India and Pakistan the book s content spans a wide range of the subject areas that fall under the aquananotechnology banner either squarely or tangentially The book strongly emphasizes sorption media with broad application to a myriad of contaminants both geogenic and anthropogenic keeping in mind that it is not enough for water to be potable it must also be palatable
