

# PHARMACOLOGY: PEDIATRIC CONSIDERATIONS

Research in pediatric populations is limited given the ethical considerations involved in conducting medical research on children.

The research we do have reveals wide variation in the pediatric response to medications compared to adults. Immature organ systems put pediatric clients at increased risk for adverse drug reactions. Response to drugs varies by age group and stage of development within the pediatric population, with the youngest clients being most sensitive to medications and most at risk of adverse effects.

## Pediatric Age Groups

Pre-natal	Post-natal	
< 36 weeks gestational age	First 4 postnatal weeks	Year 1–12
Premature Infants	Neonates	Children
36–40 weeks gestational age	Weeks 5–12	Year 12–16
Full-term infant	Infants	Adolescents

Medications to Avoid  
in Pediatric Clients

Nursing Considerations

## Pediatric Pharmacokinetic Variations

Limited protein-binding capacity:  
high free drug concentration

Immature liver:

- Reduced hepatic metabolism in neonates/infants
- Faster metabolism than adults in children

 anthropology It explores the world of folk medicine in the Caribbean Dominica local beliefs and practices concerning how the  
 body functions and malfunctions and the home remedies Dominicans use to cure common illnesses The case study goes  
 beyond discussing the exotic medical system of a developing country which includes sorcery and folk illnesses to discuss how  
 folk medicine flourishes in industrialized countries in a way that is little different than that practiced in Dominica The theme  
 is that cultural ideas about the body and uses of medicinal plants are deeply intertwined Ideas about illness direct the  
 consequent medical response The book s topic is important because knowledge of local ethnomedical practice is essential for  
 development of public health interventions in non Western settings This realist ethnography is aimed at any member of the
