The Black Death and Later Plague Epidemics in the Scandinavian Countries: Ole Jørgen Benedictow, 2016-12-19 This monograph represents an expansion and deepening of previous works by Ole J Benedictow the author of highly esteemed monographs and articles on the history of plague epidemics and historical demography In the form of a collection of articles the author presents an in depth monographic study on the history of plague epidemics in Scandinavian countries and on controversies of the microbiological and epidemiological fundamentals of plague epidemics *Encyclopedia of the Black Death* Joseph P. Byrne, 2012-01-16 This encyclopedia provides 300 interdisciplinary cross referenced entries that document the effect of the plague on Western society across the four centuries of the second plague pandemic balancing medical history and technical matters with historical cultural social and political factors Encyclopedia of the Black Death is the first A Z encyclopedia to cover the second plague pandemic balancing medical history and technical matters with historical cultural social and political factors and effects in Europe and the Islamic world from 1347 1770 It also bookends the period with entries on Biblical plagues and the Plague of Justinian as well as modern era material regarding related topics such as the work of Robert Koch and Louis Pasteur the Third Plague Pandemic of the mid 1800s and plague in the United States Unlike previous encyclopedic works about this subject that deal broadly with infectious disease and its social or historical contexts including the author's own this interdisciplinary work synthesizes much of the research on the plague and related medical history published in the last decade in accessible compellingly written entries Controversial subject areas such as whether plague was bubonic plague and the geographic source of plague are treated in a balanced and unbiased manner Daily Life during the Black Death Joseph P. Byrne, 2006-08-30 Daily life during the Black Death was anything but normal When plague hit a community every aspect of life was turned upside down from relations within families to its social political and economic structure Theaters emptied graveyards filled and the streets were ruled by the terrible corpse bearers whose wagons of death rumbled day and night Daily life during the Black Death was anything but normal During the three and a half centuries that constituted the Second Pandemic of Bubonic Plague from 1348 to 1722 Europeans were regularly assaulted by epidemics that mowed them down like a reaper's scythe When plague hit a community every aspect of life was turned upside down from relations within families to its social political and economic structure Theaters emptied graveyards filled and the streets were ruled by terrible corpse bearers whose wagons of death rumbled night and day Plague time elicited the most heroic and inhuman behavior imaginable And yet Western Civilization survived to undergo the Renaissance Reformation Scientific Revolution and early Enlightenment In Daily Life during the Black Death Joseph Byrne opens with an outline of the course of the Second Pandemic the causes and nature of bubonic plague and the recent revisionist view of what the Black Death really was He presents the phenomenon of plague thematically by focusing on the places people lived and worked and confronted their horrors the home the church and cemetery the village the pest houses the streets and roads He

leads readers to the medical school classroom where the false theories of plague were taught through the careers of doctors who futilely treated victims to the council chambers of city hall where civic leaders agonized over ways to prevent and then treat the pestilence. He discusses the medicines, prayers, literature, special clothing, art, burial practices, and crime that plague spawned. Byrne draws vivid examples from across both Europe and the period and presents the words of witnesses and victims themselves wherever possible. He ends with a close discussion of the plague at Marseille 1720-22, the last major plague in northern Europe, and the research breakthroughs at the end of the nineteenth century that finally defeated bubonic plague.
