

THE BENDIX BRAKE SYSTEM GUIDE

Of all the components in the system, the friction material on the disc brake pad or lining is what finally stops the car, so when you apply the brakes, hydraulic pressure forces the disc pad against a disc rotor.

1 HOW DO BRAKES WORK?

Applying the brake pedal activates a power booster forcing hydraulic brake fluid through the master cylinder and combination valve, via brake lines to all four wheels.

2 DISC BRAKES

The wheel assembly consists of a wheel hub and disc rotor with a caliper housing the disc brake pads. A piston in each caliper forces the disc brake pad against the rotor, creating the necessary friction to stop the rotor spinning.

Two disc brake pads on each wheel, an inner and outer, act simultaneously to bring the car to a halt. Many cars are equipped with disc brakes front and rear.

3 PARK BRAKES

The park brake is applied through either an electronic system or a cable system which operates the rear brakes only.

HOW OFTEN?

Brakes are out of sight and generally out of mind. Your brake system should be thoroughly checked once a year as a minimum. In as little as fifteen minutes, a brake specialist can give your car's braking system a safety check.

NOTE: Brakes are a critical safety system of a vehicle. The brake system should not be interfered with by anybody who does not have the appropriate skills and experience. Brake pads should be replaced by a qualified mechanic.
