Figure 2 Types of Conic Sections

A **focus** is a point about which the conic section is constructed. It is a point about which rays from the curve converge.

A **directrix** is a line used to construct and define a conic section. The distance of a directrix from a point on the conic section has a constant ratio to the distance from that point to the focus.

Definition and Properties of a Circle

A circle is a shape of a circle that has the smallest radius. The relationship between the radius and the diameter is that the diameter is twice the radius. A circle is also defined as the set of all points in a plane that are equidistant from a fixed point in a plane.

Parts of a Circle

- **Radius** is the distance between the center and any point on the circle.
- **Diameter** is the line segment connecting two points on the circle.
- **Chord** is the segment connecting two points on the circle.
- **Secant** is the line that passes through the circle, intersecting the circle at two points.
- **Tangent** is a line that touches the circle at exactly one point.
- **Normal** is a line that is perpendicular to the circle at any point.
