Lean Construction Patricia Tzortzopoulos, Mike Kagioglou, Lauri Koskela, 2020-02-26 This book collates the main research developments around Lean Construction over the past 25 years with contributions from many seminal authors in the field. It takes stock of developments since the publication of Koskela's 1992 *Application of the New Production Philosophy to Construction* and in doing so challenges current thinking and progress. It also crystallises theoretical conceptualisations and practically situated learning whilst identifying future research challenges, agendas and opportunities for global collaborative actions. The contributors present the development of Lean Construction as a fundamental part of improving construction productivity, quality and delivery of value to clients and users of built infrastructure. In doing so, the book introduces the reader to the foundational principles and theories that have influenced the way we now understand Lean Construction and has provided very useful insights to students, practitioners and researchers on key junctures over the last 25 years. Highlighting the key contemporary developments and using global case study material, the chapters demonstrate good practice but also help introduce new thinking to both lay readers and experienced practitioners alike. This book is essential reading for undergraduate and postgraduate students, researchers and practitioners with an interest in Lean Construction and construction management, providing a general understanding of the area, current state of the art knowledge as well as providing an insight into areas for future research. **Management of Construction Projects** John Schaufelberger, Len Holm, 2024-03-14 Unique among construction project management textbooks, *Management of Construction Projects* third edition takes the constructor's perspective, carefully analyzing a complex real world construction case study from multiple angles to demonstrate the skills, knowledge and techniques students require to become successful project managers. Popular as an undergraduate text and as a contractor resource, the book identifies key stages of the project management process such as delivery methods and contracts, estimating, planning and scheduling, preconstruction services, subcontracting and material management, documentation, communications and payment controls, quality and safety, leadership and ethics and claims disputes and close out. This third edition includes a novel case study, a new chapter on preconstruction services, updated contract forms and figures and additional student exercises and integrates use of project management technology. Topics include building information models, sustainable construction, environmental compliance, lean construction and off site construction. Boxed examples or short case studies have been included with each chapter. These examples correspond directly to the chapters in which they are included and give the reader an applied approach to learning the concepts presented. While primarily focused on the management of commercial projects, the principles and techniques in *Management of Construction Projects* also apply to residential, industrial and heavy construction. Written in straightforward language from a constructor's perspective, this textbook prepares upcoming construction project managers with everything they need to see a successful project through from start to finish. *Building Information Modeling in Pedagogy and*
