War in the Modern Great Power System Jack S. Levy, 2021-09-15 The apparently accelerating arms race between the United States and the Soviet Union and the precarious political conditions existing in many parts of the world have given rise to new anxiety about the possibility of military confrontation between the superpowers Despite the fateful nature of the risk we have little knowledge as Jack S Levy has pointed out of the conditions processes and events which might combine to generate such a calamity No empirically confirmed theory of the causes of war exists and the hypotheses often contradictory

that have been proposed remain untested As a step toward the formulation of a theory of the causes of war that can be tested against historical experience Levy has developed a unique data base that will serve as an invaluable resource for students of international conflict in coming years War in the Modern Great Power System provides a much needed perspective on the major wars of the past In this thorough and systematic study Levy carefully defines the Great Power concept and identifies the Great Powers and their international wars since the late fifteenth century The resulting compilation of war data is unique because of its five century span and its focus on a well defined set of Great Powers Turning to a quantitative analysis of the characteristics patterns and trends in war Levy demonstrates that although wars between the Great Powers have become increasingly serious in every respect but duration over the last five hundred years their frequency has diminished He rejects the popular view that the twentieth century has been the most warlike on record and he demonstrates that it instead constitutes a return to the historical norm after the exceptionally peaceful nineteenth century Applying his data to the question whether war is contagious he finds that the likelihood of war is indeed highest when another war is under way but that this contagious effect disappears after the first war is over Contrary to the popular war weariness theory he finds no evidence that war generates an aversion to subsequent war This study extending the scientific analysis of war back over five centuries of international history constitutes a major contribution to our knowledge of international conflict

Rethinking the International Monetary System Jane Sneddon Little, Giovanni P. Olivei, 1999 According to a recent World Bank study the Asian crisis led to a significant rise in poverty and sharp declines in middle class living standards in the countries most affected Real public spending on health and education fell with poor households experiencing the largest declines in access to these services The impact of decreased investment in human capital will have consequences for individuals and whole societies for years to come Because these external shocks occurred very shortly after these countries had liberalized their capital markets they have engendered a growing distrust of globalization in many parts of the world We owe it to the people of the developing countries as well as to ourselves to consider how institutional or policy changes could moderate such setbacks in the future For all these reasons this conference seemed a good time to pause and consider the implications of recent events institutional changes and new research for the evolution of the international monetary system Representing frontline

countries and frontline institutions many of the conference participants had struggled firsthand with the dilemmas posed by the recent crises Thus they brought unique perspectives on the issues and offered thoughtful observations and useful ideas that could improve the workings of the international monetary system It is our hope that this publication of their views will stimulate further discussion research and more than partial implementation
