

How Does **AUTISM** Affect Communication Skills?

Poor Nonverbal Conversation Skills

Autism can affect communication skills by blocking the ability to communicate using hand gestures, like pointing. These children often avoid making eye contact with people talking to them, which can come across as rude or inattentive. Many children with poor nonverbal skills become frustrated expressing their wants and needs.

Uneven Language Development

Many children with autism will eventually develop speech skills through training or therapies, but they will still struggle to communicate. Their progress is usually uneven, meaning they may excel in one area quickly but stagnate in another. For example, your child could read a novel in one day but not comprehend what they've read.

REPETITIVE OR RIGID LANGUAGE

Children with ASD with verbal communication skills may say things without meaning or relation to the conversation. For example, a child may blurt out their ABCs in a conversation about outer space. Children with verbal skills may also repeat themselves continuously. This is called echolalia, which is to repeat words they have heard. Some children may also talk in a robot-like or high-pitched voice to communicate comfortably.
