The Ethics of Food Gregory E. Pence, 2001-12-29 Food makes philosophers of us all Death does the same but death comes only once and choices about food come many times each day In *The Ethics of Food* Gregory E Pence brings together a collection of voices who share the view that the ethics of genetically modified food is among the most pressing societal questions of our time This comprehensive collection addresses a broad range of subjects including the meaning of food moral analyses of vegetarianism and starvation the safety and environmental risks of genetically modified food issues of global food politics and the food industry and the relationships among food evolution and human history Will genetically modified food feed the poor or destroy the environment Is it a threat to our health Is the assumed healthfulness of organic food a myth or a reality The answers to these and other questions are engagingly pursued in this substantive collection the first of its kind to address the broad range of philosophical sociological political scientific and technological issues surrounding the ethics of food

Working with Dynamic Crop Models Daniel Wallach, David Makowski, James W. Jones, Francois Brun, 2018-09-25 Working with Dynamic Crop Models Methods Tools and Examples for Agriculture and Environment 3e is a complete guide to working with dynamic system models with emphasis on models in agronomy and environmental science The introductory section presents the foundational information for the book including the basics of system models simulation the R programming language and the statistical notions necessary for working with system models The most important methods of working with dynamic system models namely uncertainty and sensitivity analysis model calibration frequentist and Bayesian model evaluation and data assimilation are all treated in detail in individual chapters New chapters cover the use of multi model ensembles the creation of metamodels that emulate the more complex dynamic system models the combination of genetic and environmental information in gene based crop models and the use of dynamic system models to aid in sampling The book emphasizes both understanding and practical implementation of the methods that are covered Each chapter simply

and clearly explains the underlying principles and assumptions of each method that is presented with numerous examples and illustrations R code for applying the methods is given throughout This code is designed so that it can be adapted relatively easily to new problems An expanded introductory section presents the basics of dynamic system modeling with numerous examples from multiple fields plus chapters on numerical simulation statistics for modelers and the R language Covers in detail the basic methods uncertainty and sensitivity analysis model calibration both frequentist and Bayesian model evaluation and data assimilation Every method chapter has numerous examples of applications based on real problems as well as detailed instructions for applying the methods to new problems using R Each chapter has multiple exercises for self testing or for classroom use An R package with much of the code from the book can be freely downloaded from the CRAN package repository
