

A 3D illustration of a DNA double helix. The sugar-phosphate backbones are shown as thick, light blue ribbons that spiral around each other. Between the backbones, the nitrogenous base pairs are represented by thin, colored rods: red, yellow, green, and blue. A transcription bubble is depicted where the DNA strands have unwound. Inside this bubble, a red rod (coding strand) and a yellow rod (template strand) are visible. A green rod, representing a nascent mRNA strand, is shown emerging from the template strand within the bubble. The overall scene is set against a soft, light blue background.
