Component Deployment Judith Bishop, 2002-06-14 Deployment is the act of taking components and readying them for productive use There may be steps following deployment such as installation or management related functions but all decisions about how to configure and compose assemble a component are made at the deployment stage This is therefore the one opportunity in the software lifecycle to bridge the gap between what the component developer couldn't know about the deployment environment and what the environment's developer couldn't know about the open set of deployable components It is not surprising that deployment as a dedicated step gains importance when addressing issues of system wide qualities such as coping with constrained resources or preparing for component adaptation and system evolution Yet component deployment is still a discipline in its infancy it became mainstream practice only in the mid 1990s Much of the best practice impulse originated in products like Microsoft's Transaction Server and its approach to attribute based programming and later products like Enterprise JavaBeans and now the Corba Component Model All these address the specific needs of enterprise application servers However the potential of the deployment concept

goes far beyond this Deployment can and should touch effectively all truly component based solutions The proceedings of Component Deployment 2002 represent a good cross section of the gamut of deployment issues From customization to address source constraints to reconfiguration of deployed systems and from architecture to design to languages the avid reader will find some contribution

The Journal of Immunology, 1927 **Principles of Psychology** Jacob Robert Kantor, 1924 Originally published in 1924 this book as the title suggests provides an overview of the principles of psychology Written at a time when psychology was a youthful science and the debate over the field's status as a natural science or even as a science at all was relatively fresh Principles of Psychology represents a stock taking of sorts a survey of the ends achieved and the newer trends of development in psychological research The author's aim is to present and study psychological phenomena as actual observable events consisting of the responses of psychological organisms on the one hand and the stimulus objects or conditions which interact with them on the other By dispensing with animatistic conceptions and intangible psychic phenomena that previously

dominated the field the author hopes to bolster psychology's position as a member of the family of natural sciences According to the author only by avoiding meticulously all powers or functions whether considered as psychic or biological which do not represent actual observable phenomena or interpretations derived from such observations can psychology as a science be erected upon a firm foundation It is to this end that the author presents 15 chapters on a wide range of topics that represent the core concepts and principles of psychology The Domain Method and Development of Psychology The Primary Data of Psychology The Psychological Individual or Personality The Psychological Organism or Personality in Action The Simpler or Foundation Behavior Segments The Nature of Basic Conduct and How it is Developed The Development and Operation of Complex Human or Societal Conduct Attention Behavior as the Actualization of Stimuli The Nature of Sensing and Perceiving Implicit Action as Responses to Absent Stimuli Objects Association as a Fundamental Type of Psychological Activity The Primary Internal Character of Feeling Reactions Knowing as Determining and Orientating Conduct The Nature of Volitional Conduct and finally The Integrative Nature of Habit Reactions PsycINFO Database Record c 2005 APA all rights reserved
