

## Operator Interface Terminal Manual Standard Two or Three Pump VFD Booster

The Operator Interface Terminal (OIT) allows the operator to monitor the status of the pump system as well as change system variables to improve or modify the performance of the pump system. All system variables can be changed while the system is operating, with proper password entry. This allows the operator to observe the effects of the changes immediately.

The OIT consists of a LCD display with a sealed switch keypad. The keys are labeled by category. The operation of the OIT can be summarized into 2 modes of operation:

- I. Display Information
- II. Modify System Variables

These two modes will be referred to as DISPLAY MODE and MODIFY MODE throughout this document.

All of the OIT functions are grouped into 11 major categories, which are selected by using the appropriate key on the keypad. All of the yellow captioned buttons are password protected. Once the main category has been selected, the *Page Up*, *Page Down*, *Clear*, *Enter* and *Toggle* keys are used to navigate within the selected category and change variable values.

### Display Mode

To display a particular message or variable, simply press one of the category keys (green, blue, red, or yellow keys) to select the desired category, then use the *Page Up* or *Page Down* keys to scroll through the messages within the category until the desired message is displayed. The *Page Down* key scrolls forward through the messages and the *Page Up* key scrolls backward. The category keys can be used at nearly any time to switch to a different category of messages. The lone exception is when a password-protected category has been selected and the password is being requested. In this instance, it is necessary to press the *Clear* button first before selecting a new category.
