

Chapter 15.1

The heart is a muscular pump that generates the force required to move blood through the body's blood vessels. Along the way, oxygen & nutrients in the blood are distributed to tissue cells, while carbon dioxide & other waste products are removed & transported by the blood to various organs for disposal. Without circulation, deprived cells will begin irreversible change, which quickly leads to their death. The heart & blood vessels together constitute the cardiovascular system. During normal daily activities, the heart pumps the entire volume of blood approximately every minute.

- Veins carry blood toward the heart
- Arteries carry blood away from the heart
- Gas, nutrient, & waste exchange occur in microscopic blood vessels that lie between arteries & veins: **capillaries**.
- Cardiovascular system has 2 closed pathways/circuits of blood flow

Pulmonary circuit: system of blood vessels that transport blood between heart & lungs

- **sends deoxygenated blood**
