The Routledge International Handbook of Young Children's Thinking and Understanding Sue Robson,Suzanne Flannery Quinn,2014-11-13 This ground breaking handbook provides a much needed contemporary and authoritative reference text on young children s thinking The different perspectives represented in the thirty nine chapters contribute to a vibrant picture of young children their ways of thinking and their efforts at understanding constructing and navigating the world The Routledge International Handbook of Young Children s Thinking and Understanding brings together commissioned pieces by a range of hand picked influential international authors from a variety of disciplines who share a high public profile for their specific developments in the theories of children s thinking learning and understanding The handbook is organised into four complementary parts How can we think about young children s thinking Concepts and contexts Knowing about the brain and knowing about the mind Making sense of the world Documenting and developing children s thinking Supported throughout with relevant research and case studies this handbook is an international insight into the many ways there are to understand children and childhood paired with the knowledge that young children have a strong vital and creative ability to think and to understand and to create and contend with the world around them An Inquiry into Science Education, Where the Rubber Meets the Road Richard N. Steinberg,2012-01-01 An inquiry into science education is an exploration into education in a context that is grounded and significant It is written by a college professor of Physics and Science Education who spent sabbatical year as a full time science teacher in a neighborhood high school in a poor area of New York City His varied experiences highlight the contrast of what science education is and what it can be The framework through which the book is written is that science education should be an active purposeful process which promotes functional understanding and critical thinking Science learners should be given the opportunity to build an understanding of benchmark principals of science based on their own observations and reasoning In much the same way this book explores benchmark principals of science education through real classroom experiences Standard approaches of teaching and assessment are presented and alternative opportunities are described Theories and strategies of science education emerge from analysis of classroom observations Although the focus is on the teaching and learning of science the subtext is implications of a failing educational system and what can be done about it The primary intended audience is educators of all capacities but particularly science teachers An inquiry into science education integrates critical topics of science education in a contextualized accessible and easy to read narrative The secondary intended audience is non fiction readers This book examines educational issues relevant to a general audience from the perspective of a scientist with a focus on inquiry and reasoning Critical issues are addressed through case histories some with touches of humor but all with insight into children and learning
